BUREAU OF THE CENSUS

GEORGE HAY BROWN, *Director*

ROBERT F. DRURY, *Deputy Director*

EDWIN D. GOLDFIELD, *Assistant Director for Program Development*

ACKNOWLEDGMENTS

This edition of the *Statistical Abstract* was prepared under the direction of William Lerner, Chief, General Reports Division. Helen E. Teir, Chief, Statistical Abstract Branch, was responsible for general supervision and compilation, assisted by Juanita A. Wright for technical editorial work. Minerva K. Moreland and Marvine W. Bradford had primary responsibility for editing and clerical operations.

The cooperation of the many contributors to this volume is gratefully acknowledged. The list of sources of tables (pp. 965-970) and the source note below each table credit the various government and private agencies which have collaborated in furnishing information for the *Statistical Abstract*.

In a few instances, contributors have requested that their data be designated as subject to copyright restrictions. The source notes to the tables affected include a copyright notice. Permission to use copyright material should be obtained directly from the copyright owner.

SUGGESTED CITATION

U.S. Bureau of the Census, *Statistical Abstract of the United States:*
1970. (91st edition.) Washington, D.C. 1970.

PREFACE

The *Statistical Abstract of the United States*, published annually since 1878, is the standard summary of statistics on the social, political, and economic organization of the United States. It is designed to serve as a convenient volume for statistical reference and as a guide to other statistical publications and sources. The latter function is served by the introductory text to each section, the source notes appearing below each table, the Guide to Sources, the section on Publications of Recent Censuses, and the Guide to State Statistical Abstracts.

This volume includes a selection of data from many statistical publications, both governmental and private. Publications cited as sources usually contain additional statistical detail and more comprehensive discussions of definitions and concepts than can be presented here. Data not available in publications issued by the contributing agency but obtained from the agency's unpublished tabulations and records are identified in the source notes as "unpublished data." More information on the subjects covered in tables so noted may generally be obtained from the source.

Except as otherwise indicated, figures are for the United States as presently constituted. Although emphasis in the *Statistical Abstract* is given primarily to national data, many tables present data for regions and individual States. Statistics for the Commonwealth of Puerto Rico and for outlying areas of the United States are included in the State tables whenever available and are supplemented by information in section 31. Statistics for cities or other relatively small geographic units appear only in a few instances. Additional information for cities, counties, metropolitan areas, congressional districts, and other small units, as well as more historical data, are available in various supplements to the *Abstract*. (See page v.)

Changes in the 1970 edition.—This edition, the 91st annual issue, presents data for the most recent year or period available during the early part of 1970.

Each year the more than 1,300 tables and charts are reviewed and evaluated. New tables and charts of current interest are added, continuing series are brought up to date, and less timely data are curtailed or eliminated. Text notes are revised as necessary to incorporate new definitions and source references.

This year the new data emphasize social measures. Coverage of minority groups in the population has been increased substantially with new tables on Negro physicians (table 88), school enrollment (tables 172-175), Negro elected officials (table 546), voter registration and turnout (tables 554 and 556), and minority-owned businesses (table 710). In addition, many tables have been revised to cover minority group aspects of subjects which were, in past editions, more limited in presentation.

The continuing public interest in poverty is reflected in five new tables, including one specifically on Appalachia (table 506), and in new data on Federal food programs (tables 121-126), work and training programs (tables 203-205), public assistance recipients (table 450-451), and substandard housing (table 1094). There are also some new data on military affairs. Estimated costs of all American wars appear in table 371; changes in military occupations in table 393; and data on Selective Service Act violations in table 400. Pollution of the environment is covered in section 6, with new data on air pollutant emissions and solid waste collected (tables 264 and 265). The "Recent Trends" summary (p. xiii), introduced in the 1969 edition, has also been expanded to include a greater number of social and economic time series.

Section 33, "Metropolitan Area Statistics," introduced in the 1967 edition, has been updated for the fourth consecutive year. Reprints of this section may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. The price per copy is 35 cents; a discount of 25 percent is allowed on orders of 100 copies or more sent to the same address.

In addition, many of the sections have undergone fairly extensive tabular rearrangement and format changes designed to improve the organization of subject matter.

Altogether there are 86 entirely new tables in this edition, scattered through 23 sections. Following is a list of subjects covered by the new tables:

Characteristics of families, by race, p. 38	Protection against income loss from short-term illness, p. 287
Physicians, by sex, age, and place of graduation, p. 65	Characteristics of AFDC families, p. 298
Negro physicians, p. 66	OAA recipient characteristics, p. 298
Cigarette smokers, p. 81	Persons below poverty level, p. 329
USDA low-cost food plans, p. 85	Appalachia, p. 331
Federal food assistance programs, p. 86	Weekly food cost per family, p. 346
School expenditures, by source of funds, p. 105	Vote cast for President, by region, p. 358
Negro, Spanish-American, and Indian school enrollment, pp. 118-120	Characteristics of Congressmen, p. 360
Pupil transportation, p. 120	Negro elected officials, p. 361
Classroom teachers, by type of school, p. 123	Voter registration and turnout, p. 368
MDTA enrollment, completions, and employment, p. 133	Election campaign expenditures, pp. 371, 372
Work and training programs, pp. 133, 134	Mortgage debt outstanding, by type of holder and property, p. 448
Murder victims, p. 145	Minority and nonminority-owned business, p. 471
Salaries of policemen and firemen, p. 151	Television stations, p. 497
Law firms, p. 155	Research and development outlays, p. 519
Air pollution, p. 172	Expenditures for scientific purposes, p. 522
Solid waste collected, p. 172	Shipments of atomic energy equipment and products, p. 528
Outdoor recreation, Federal acquisitions and grants, p. 199	Automobile operating costs, p. 547
Unemployment, by States, p. 217	Selected farm indexes of inputs, p. 599
Wage and benefit decisions, p. 233	Uranium, p. 665
Department of Defense outlays, p. 247	Substandard housing units, p. 685
Estimated cost of American wars, p. 248	Distribution and services summary, p. 733
Military personnel, by occupation, p. 260	Department stores, p. 736
Selective Service Act violations, p. 263	Architectural, engineering firms, p. 749
Medicare-Hospital insurance, p. 287	

Of the tables included in the 1969 edition, 76 were omitted from this issue. The omissions represent primarily tables for which comparable details appear in the new or retained tables or for which no recent data are available.

Responsibility.—The contents of this volume were taken from a large number of sources (see "Source Agencies and Table Numbers"). The Bureau of the Census cannot accept the responsibility for the accuracy or limitations of the data presented here, other than for those which it collects. The responsibility for selection of the material and for proper presentation, however, rests with the Bureau.

SUGGESTIONS AND COMMENTS

Many persons have offered suggestions for improving the presentation of data in the *Statistical Abstract* and its supplements. Their comments have been most helpful. Users of these publications are urged to continue to make their needs known for consideration in planning future editions. Suggestions and comments should be sent to the Director, Bureau of the Census, Washington, D.C. 20233.

FOR ADDITIONAL INFORMATION ON DATA PRESENTED

please consult the source publications available in local libraries or write to the agencies indicated in the source notes to the tables covering the desired subject. Write to the Bureau of the Census only if it is cited as the source.

STATISTICAL ABSTRACT SUPPLEMENTS

Pocket Data Book, USA 1969. Graphic and tabular presentation of summary statistics on a wide variety of subjects. Designed for quick and easy reference. In color; pocket-size; 360 pages. Issued 1969. Price \$2.75 (paperbound).

County and City Data Book, 1967. A presentation of 144 items of statistical data for each county in the United States, 113 items for each of 224 standard metropolitan statistical areas, and 148 items for each of 683 incorporated cities having 25,000 inhabitants or more in 1960. Information also presented for geographic regions and divisions, and for States. Items included based largely on results of 1962 census of governments, 1963 censuses of business, manufactures, and mineral industries, 1964 census of agriculture, and 1960 censuses of population and housing. 713 pages. Issued 1967. Price \$7.75 (clothbound).

Historical Statistics of the United States, Colonial Times to 1957. Prepared with the cooperation of the Social Science Research Council. More than 8,000 series, largely annual, on social and economic development from 1610 to 1957. 801 pages. Issued 1960. Price \$6.00 (clothbound).

Historical Statistics of the United States, Colonial Times to 1967; Continuation to 1962 and Revisions. Carries forward the more than 6,000 series in the basic volume that are still current; includes about 300 related series; and presents revisions and corrections for more than 650 series. 158 pages. Issued 1965. Price \$1.50 (paperbound).

Directory of Non-Federal Statistics for States and Local Areas: 1969. A finding guide to sources of statistics issued by State agencies, colleges and universities, and private organizations. Specific sources shown for each State, the District of Columbia, Puerto Rico, Guam, and Virgin Islands on population, vital statistics, health, education, public welfare, employment, law enforcement, and other subjects. 686 pp. Issued 1970. Price \$6.25 (paperbound).

Directory of Federal Statistics for States: 1967. A finding guide to sources of Federal statistics available at the State level. Specific sources shown for hundreds of items of information on social and economic subjects. 380 pages. Issued 1968. Price \$2.25 (paperbound).

Directory of Federal Statistics for Local Areas: 1966. Similar to the directory for States, cited above, but devoted to the data available for metropolitan areas, counties, urban places, and other local areas below the State level. 162 pages. Issued 1966. Price \$1.00 (paperbound).

Mail purchase orders to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

GUIDE TO TABULAR PRESENTATION

The following symbols, used in the tables throughout this book, are explained in condensed form in footnotes to the tables where they appear:

- Represents zero or rounds to less than half the unit of measurement shown.
- B Base figure too small to meet statistical standards for reliability of derived figure.
- D Figure withheld to avoid disclosure of information pertaining to a specific organization or individual.
- NA Data not enumerated, tabulated, or otherwise available separately.
- NS Percent change not relevant or significant.
- S Figure does not meet publication standards for reasons other than that covered by symbol B, above.
- X Figure not applicable because column heading and stub line make an entry impossible, absurd, or meaningless.
- Z Entry would amount to less than half the unit of measure shown.

Headnotes immediately below table titles provide information important for correct interpretation or evaluation of the table as a whole or for a major segment of it.

Footnotes below the bottom rule of tables give information relating to specific items or figures within the table.

Unit indicators ("In thousands," "In millions of dollars," etc.) are usually given in boldface type as the first element of the headnote. In tables where several units are used, the unit indicators are generally given in the stub or in the column headings.

Median: The value which divides the distribution into two equal parts—one-half the cases falling below this value and one-half exceeding it.

Parallel vertical rules are used to the right of a total column to indicate—

- (1) that the components which follow add to the total (e.g., tables 1, 3, 7, etc.);
- (2) in the case of derived figures, that the underlying data are additive to their total (e.g., table 15 for percentages, table 22 for ratios, table 56 for rates, table 86 for averages, and table 162 for medians).

Heavy vertical rules are used—

- (1) in tables where the stub (the area, date, or descriptive column at the left) is continued into one or more additional columns across the table to separate each segment of stub and its accompanying data columns from the continued segments (e.g., tables 2, 4, 6, etc.);
- (2) to set off independent sections of a table (e.g., tables 1, 3, 5, etc.).

In many tables, details will not add to the totals shown because of rounding.

Section 1

Population

This section presents statistics on the growth, distribution, and characteristics of the population of the United States. The principal source of these data is the Bureau of the Census, which conducts a decennial census of the population and a monthly current population survey and also prepares periodic population estimates. For a list of publications, see the Guide to Sources in Appendix III of this book.

Decennial censuses.—The Constitution provides for a census of the population every 10 years, primarily to establish a basis for apportionment of Members of the House of Representatives among the States. For over a century after the first census in 1790, the census organization was a temporary one. In 1902, the Bureau of the Census was established as a permanent Federal agency, responsible for enumerating the population and also for compiling statistics on other subjects and at other times.

In population censuses, each person is counted as an inhabitant of his usual place of residence. While this place is not necessarily his legal residence, voting residence, or domicile, the use of these different bases of classification would usually produce substantially the same statistics.

In recent censuses, some data were obtained from representative samples of the population rather than from a complete count, as follows: 5 percent in 1940, 20 percent in 1950, 25 percent in 1960, and 5, 15, and 20 percent in 1970. Exact agreement is not to be expected among the various samples, nor between them and the complete count, but sample data may be used with confidence where large numbers are involved and assumed to indicate patterns and relationships where small numbers are involved.

Data from the 1970 census, taken as of April 1, were not available in time for inclusion in this book. For scheduled release dates of 1970 census reports, see "Publications of Recent Censuses" in Appendix III.

Estimates based on evaluation studies of the 1960 census results indicate a total net underenumeration of about 5.7 million persons, of whom about 2.1 million persons were of races other than white. Although the amount of underenumeration was about the same as in the 1950 census, the percentage was somewhat less. Data from the 1950 and 1960 censuses have not been adjusted for the estimated underenumeration.

Current Population Survey.—This is a monthly nationwide survey of a scientifically selected sample representing the noninstitutional civilian population. The sample is located in 449 areas comprising 863 counties and independent cities with coverage in every State and the District of Columbia. About 58,500 housing units and other quarters are designated for the sample at any time, of which about 50,000 (containing 105,000 persons 16 years old and over) are occupied by households eligible for interview; of these, in turn, about 4 to 6 percent are, for various reasons, unavailable for interview. See also text, section 8, Labor Force, Employment, and Earnings.

Population estimates and projections.—National estimates are derived by use of decennial census data as benchmarks and of data available from various agencies as follows: Births and deaths (Public Health Service); immigrants and emigrants (Immigration and Naturalization Service); the Armed Forces (Department of Defense); net migrants (Puerto Rico Planning Board); and Federal employees abroad (Civil Service Commission). State estimates are based on similar data and also on school statistics from State Departments of Education and parochial school systems.

National population projections indicate the approximate future level and characteristics of the population under given assumptions as to future fertility, mortality, and net immigration. The method used to develop the projections involved preparation of projections of each of the components of population change—births, deaths,

and net immigration—and the combination of these with July 1 estimates of the current population. Projections for States and metropolitan areas incorporate further assumptions about population redistribution through interarea migration.

Current estimates and projections are consistent with official census figures and are not adjusted for estimated census underenumeration. For details on methodology, see the sources cited below individual tables.

Standard Metropolitan Statistical Areas (SMSA).—The entire territory of the United States has been classified by the Bureau of the Budget as (a) metropolitan, or “inside SMSA’s,” and (b) nonmetropolitan, or “outside SMSA’s.” An SMSA is a county or group of contiguous counties (except in New England) which contains at least one central city of 50,000 inhabitants or more or “twin cities” with a combined population of at least 50,000. In addition, other contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, towns and cities rather than counties are used in defining SMSA’s. Central cities are those named in the titles of the areas. For a more detailed explanation and a listing of the component areas of each SMSA, see Bureau of the Budget, *Standard Metropolitan Statistical Areas*, 1967 edition. Data on metropolitan-nonmetropolitan residence relate to SMSA’s as defined at the time of the 1960 Census of Population except as noted.

Urban and rural areas.—According to the 1960 census definition, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more.

Substantially the same definition was used for the 1950 census, the major difference being the designation in 1960 of urban towns in New England and urban townships in New Jersey and Pennsylvania. In censuses prior to 1950, the urban population comprised all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under somewhat different rules relating to population size and density. In all definitions, the population not classified as urban constitutes the rural population.

Changes in the size of the urban population from one census to another are affected by 2 components: (a) Growth in areas classified as urban at the beginning of the decade; and (b) reclassification of rural territory as urban and urban territory as rural. Between censuses, it is possible only to obtain measures of the first component from the Current Population Survey (see p. 1). Measures of the second are too costly. Since about 60 percent of the urban population growth between 1950 and 1960 was attributable to expansion of urban territory, data on the urban population from the Survey may be misleading. Consequently, regular publication of data on urban-rural residence from the Current Population Survey has been discontinued.

Farm and nonfarm residence.—The rural population is divided into “rural-farm,” comprising all persons living on farms, and “rural-nonfarm,” comprising the remainder. According to the 1960 census definition, the farm population consists of all persons living in rural territory on places of less than 10 acres yielding agricultural products which sold for \$250 or more in the previous year, or on places of 10 acres or more yielding agricultural products which sold for \$50 or more in the previous year.

Race.—The population is divided into three groups on the basis of race: White, Negro, and other. The last category includes Indians, Japanese, Chinese, and any

other race except white and Negro. Persons of Mexican birth or ancestry are classified as white unless they are definitely of some other racial stock, such as Indian.

Mobility status.—Classification of the population by mobility status is based on comparison of an individual's place of residence at the survey or census date with that of a specified earlier date. *Mobile persons or movers* includes all persons living in different houses in the United States at the beginning and at the end of the period. According to their new location, they may be "same county movers" or "different county movers, or migrants." Migrants in turn are classified according to whether they moved within the same State or into a different State. *Nonmobile persons or nonmovers* includes all persons living in the same house in the United States at the beginning and end of the period. *Persons abroad* includes all persons living outside the United States at the beginning of the period.

Nativity.—The category "Native" comprises persons born in the United States, the Commonwealth of Puerto Rico, or a possession of the United States. It also includes persons born in a foreign country or at sea who have at least one parent born in the United States. Persons whose place of birth was not reported are assumed to be native unless their census report contains contradictory information, such as an entry of a language spoken prior to coming to the United States. Persons not having any of the foregoing qualifications are classified as "foreign born."

Household.—A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment or other group of rooms, or a room that constitutes "separate living quarters." A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone or a group of unrelated persons sharing the same housing unit as partners is also counted as a household. Prior to 1960 a household was defined as all the persons occupying a "dwelling unit." See text, section 27, Construction and Housing, for definitions of "housing unit" and "dwelling unit."

Group quarters are living arrangements for persons who do not live in housing units. Examples of group quarters are: A rooming house, an institution, a college dormitory, or a military barracks.

Family.—The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together in a household. A primary family consists of the head of a household and all other persons in the household related to the head. A secondary family comprises two or more persons such as guests, lodgers, or resident employees and their relatives, living in a household and related to each other.

Subfamily.—A "subfamily" is a married couple with or without children, or one parent with one or more unmarried children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. Members of a subfamily are also members of the primary family with whom they live. The number of subfamilies, therefore, is not included in the number of families.

Married couple.—A "married couple" is defined as a husband and his wife living together in the same household, with or without children and other relatives.

Unrelated individuals.—"Unrelated individuals" refers to persons (other than inmates of institutions) who are not living with any relatives. A primary individual is a household head living alone or with nonrelatives only. A secondary individual in a household is a person such as a guest, lodger, or resident employee who is not related to any other person in the household. Persons in group quarters, except inmates of institutions, are classified as secondary individuals.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

FIG. II. UNITED STATES POPULATION—PROJECTIONS TO 1990

[See table 7]

FIG. III. POPULATION CHANGES IN METROPOLITAN AREAS, BY RACE: 1950-60 AND 1960-69

[See table 14]

No. 1. POPULATION AND AREA: 1790 TO 1960

[Area figures represent area on indicated date including in some cases considerable areas not then organized or settled, and not covered by the census. Area figures have been adjusted to bring them into agreement with remeasurements made in 1940. For additional area data, see tables 10 and 252. See also *Historical Statistics, Colonial Times to 1867*, series A 17-21]

No. 9. CENTER OF POPULATION FOR CONTERMINOUS U.S.: 1790 TO 1960

["Center of population" is that point which may be considered as center of population gravity of the United States or that point upon which the United States would balance if it were a rigid plane without weight and the population distributed thereon with each individual being assumed to have equal weight and to exert an influence on a central point proportional to his distance from that point]

YEAR	North latitude			West longitude			Approximate location
	°	'	"	°	'	"	
1790.....	39	16	30	76	11	12	23 miles east of Baltimore, Md.
1850.....	38	59	0	81	19	0	23 miles southeast of Parkersburg, W. Va.
1900.....	39	9	36	85	48	54	6 miles southeast of Columbus, Ind.
1950.....	38	50	21	88	9	33	8 miles north-northwest of Olney, Richland County, Ill.
1960.....	38	37	57	88	52	23	4 miles east of Salem, Marion County, Ill.

NA. Not available. X Not applicable. Z Less than 0.5 square mile.

¹ Includes estimated population of the Philippines (16,356,000), not shown separately.

² Census taken as of Oct. 1, 1939.

³ Puerto Rico was ceded to the United States by Spain in 1898. On July 25, 1952, pursuant to acts of Congress, it achieved the political status of the Commonwealth of Puerto Rico.

⁴ Not enumerated.

⁵ Enderbury Island uninhabited at time of enumeration.

⁶ Sand Island uninhabited at time of enumeration.

⁷ Little Swan Island uninhabited at time of enumeration.

⁸ Includes Caroline, Christmas, Danger (Pukapuka), Flint, Funafuti, Kingman Reef, Malden, Manahiki, Navassa, Nukuletau, Nukulailai, Nurakita, Palmyra, Penrhyn, Rakabanga, Starbuck, Vostok, Phoenix Group (except Canton and Enderbury), and Union (Tokelau) Group, not enumerated in decennial censuses; and Baker, Howland, and Jarvis Islands not inhabited in 1950 and 1960. Quita Sueño Bank, Roncador Cay, and Serrana Bank, claimed by both the United States and Colombia, not enumerated.

⁹ Population of Baker, Howland, and Jarvis Islands. Other islands not enumerated or uninhabited at time of enumeration.

¹⁰ Not enumerated or uninhabited at time of enumeration.

¹¹ Area is for Navassa (2 square miles), Baker, Howland, and Jarvis (combined area 3 square miles), and Palmyra (4 square miles). Excludes Kingman Reef, Quita Sueño Bank, Roncador Cay, and Serrana Bank (each less than 0.5 square mile); area of other islands listed in footnote 8 not available.

¹² Under jurisdiction of United States in accordance with treaty of Nov. 18, 1903, with Republic of Panama.

¹³ Leased (1914) from the Republic of Nicaragua for 99 years.

¹⁴ Figures from Government of Nicaragua. Little Corn Island uninhabited at time of enumeration.

¹⁵ Under the United Nations Trusteeship System with the United States as administering authority since July 18, 1947.

¹⁶ Population 1940, 131,258 (Census of Japan).

¹⁷ Estimated civilian population as of June 30, 1950; see *Current Population Reports*, Series P-25, No. 238, for derivation of estimates.

¹⁸ Census of 1958 conducted by the Office of the High Commissioner. Civilian population; see *Census Report, 1958: Trust Territory of the Pacific Islands*, Office of the High Commissioner, Agaña, Guam, June 1959.

¹⁹ See references in footnotes 17 and 18, above. Comprised of 687 square miles of land area and 7,797 square miles of water area.

²⁰ Excludes U.S. citizens temporarily abroad on private business, travel, etc. Such persons were enumerated at their usual place of residence in the United States as absent members of households.

²¹ Excludes dependents of Federal employees and crews of merchant vessels.

²² Based on 20-percent sample of reports received.

²³ Represents U.S. citizens abroad for extended periods of time. Since this population was enumerated on a voluntary basis, its coverage is probably less complete than that of other categories of Americans abroad.

No. 12. POPULATION PROJECTIONS—STATES: 1975 AND 1985

[In thousands. As of July 1. Roman numerals I and II indicate interstate migration assumptions based on gross migration patterns of the 1955-60 period. Under Series I, those patterns continue throughout the projection period. Series II allows for convergence of the gross migration rates during the projection period. Letters B and D represent national population projections series from table 7. See source for detailed explanation.]

Z. Less than 0.05 percent.

² For United States, population of United States has been divided by total land area. For each State and Puerto Rico, population at given census has been divided by land area as then constituted, except that 1930 figures are based on revised land areas used for 1940.

— Represents zero. X Not applicable.

¹ Total resident population. Covers 231 SMSA's as defined by the Bureau of the Budget, July 1, 1960. For New England, SMSA's are modified to nearest metropolitan State economic area or county equivalent. See text, p. 2.² Based on sample. ³ Adjusted to exclude 12,520 double count of Ft. Belvoir, Fairfax County, Va.⁴ No metropolitan area in State.⁵ Includes Middlesex and Somerset Counties, which are part of New York, N.Y.-Northeastern N.J. Standard Consolidated Area.

No. 19. CITIES WITH 100,000 INHABITANTS OR MORE IN 1960—POPULATION, 1910 TO 1960, AND AREA, 1960

[Increase from census to census includes that due to annexation of territory as well as to direct growth. "Cities" refers to political subdivisions which are incorporated as cities, boroughs, towns, or villages with the exception that towns are not recognized as incorporated places in New England States, New York, and Wisconsin. Land area figures, generally supplied by city engineers, have been revised to agree with those in the Bureau of the Census, *Area Measurement Reports*, Series GE-20]

X Not applicable. ¹ The cities of Madison, Wis., and Rockford, Ill., share the same rank of 96. In order to have the lowest rank equal to the number of cities presented, the number 97 is omitted.

² Revised population figure for Milwaukee, Wis., is 741,321; for Mobile, Ala., 202,779; for Norfolk, Va., 304,860.

³ Based on revised total population figure; see footnote 2.

⁴ Population shown is for New York City as now constituted.

⁵ Omaha and South Omaha cities consolidated between 1910 and 1920. Combined population, 1910: 150,365.

⁶ Not incorporated in 1910.

Source: Dept. of Commerce, Bureau of the Census; U.S. Census of Population: 1960, Vol. I and Area Measurement Reports, Series GE-20.

NO. 20. URBAN AND RURAL PLACES AND POPULATION, BY SIZE OF PLACE: 1910 TO 1960

[Prior to 1960, excludes Alaska and Hawaii. "Previous urban definition" refers to the definition used prior to 1950 when a number of large and densely settled places were not included as urban because they were not incorporated. In 1950, the Bureau of the Census adopted the concept of the urbanized area and delineated boundaries for unincorporated places. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the "current" definition. See also *Historical Statistics, Colonial Times to 1957*, series A 181-209]

X Not applicable. ¹ Includes small number of hotels, institutions, and other quasi-households.

² Computed by compound interest formula. ³ Obtained by dividing total population by number of households; hence, not strictly average size of household because total population includes members of quasi-households.

⁴ Estimated. ⁵ Population in occupied housing units.

No. 41. HOUSEHOLD AND FAMILY UNITS, 1960 AND 1965, AND PROJECTIONS, 1970 TO 1985, BY TYPE

(In thousands. As of July 1, except as noted. Includes members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces. The projections are based on combinations of two different assumptions about the level of the marriage rates in future years and two different assumptions about trends in the proportions of the population in the various household and family status classes. Household projection Series 1 is the product of the higher marriage assumptions and the higher household and family status assumptions. Series 2 is the product of the lower marriage assumptions and the lower household and family assumptions. For additional explanation, see source.)

No. 46. SELECTED EVENTS IN FAMILY LIFE CYCLE FOR WOMEN BORN FROM 1880 TO 1939, BY YEAR OF BIRTH

[For definition of median, see preface]

EVENT	YEAR OF BIRTH					
	1880-1889	1890-1899	1900-1909	1910-1919	1920-1929	1930-1939
Median age of women at—						
First marriage.....	21.6	21.4	21.1	21.7	¹ 20.8	¹ 19.9
Birth of first child.....	22.9	22.9	22.6	23.7	¹ 23.0	¹ 21.5
Birth of last child.....	32.9	31.1	30.4	31.5	¹ 30.0-31.0	(NA)
First marriage of last child ²	56.2	53.5	51.9	53.0	51.5-52.5	(NA)
Death of one spouse:						
For all couples ³	57.0	59.4	62.3	63.7	64.4	64.4
For couples surviving to first marriage of last child ⁴	69.2	68.1	67.8	68.2	67.2-68.2	(NA)
Median years between events—						
For all couples:						
First marriage to birth of last child.....	11.3	9.7	9.3	9.8	9.2-10.2	(NA)
First marriage to death of one spouse.....	35.4	38.0	41.2	42.0	43.6	44.5
For couples surviving to marriage of last child:						
First marriage of couple to marriage of last child.....	43.6	32.1	30.8	31.3	30.7-31.7	(NA)
First marriage of last child to death of one spouse.....	13.0	14.6	15.9	15.2	15.2-16.2	(NA)

NA Not available.

¹ Projected from partial experience.

² Assumes woman has last child at median age for cohort and last child marries at estimated median age at first marriage for children; for further discussion, see source.

³ Assumes wife first married at median age for cohort to husband 3 years older.

⁴ Measure applies to couples surviving jointly to median age of women at marriage of last child.

No. 50. RELIGIOUS BODIES—SELECTED DATA

[Represents latest information available from religious bodies with memberships of 50,000 or more; excludes a few groups giving no data. Totals include substantially those religious bodies reporting to Bureau of the Census for Census of Religious Bodies in 1936. Not all groups follow same calendar year nor count membership in same way; some groups give only approximate figures. Roman Catholics count all baptized persons, including infants; Jews regard as members all Jews in communities having congregations; Eastern Orthodox Churches include all persons in their nationality or cultural groups; most Protestant bodies count only persons who have attained full membership, and previous estimates have indicated that all but a small minority of these are over 13 years of age; however, many Lutheran bodies and The Episcopal Church now report all baptized persons, and not only those confirmed. Data which appear in italics are "noncurrent," i.e., they are reported for 1967 or earlier. All other data are "current" and were reported in 1968 or 1969]

Section 2

Vital Statistics, Health, and Nutrition

This section presents vital statistics—data on births, deaths, fetal deaths (stillbirths), marriages, divorces—and data on communicable diseases, mental illness, medical care, hospitals, and nutrition. Vital statistics are compiled and published by the Public Health Service in the annual report, *Vital Statistics of the United States*, in certain reports of the *Vital and Health Statistics* series, and in the *Monthly Vital Statistics Report*. Reports in this field are also issued by State bureaus of vital statistics. Current data on fertility of the population and on age of persons at first marriage are compiled by the Bureau of the Census from its Current Population Survey (see text, p. 1) and published in *Current Population Reports*, Series P-20.

Births and deaths.—The collection of death statistics on an annual basis began in 1900 with 10 registration States and the District of Columbia; the collection of birth statistics began in 1915, also with 10 States and the District of Columbia. The changing composition of the two registration areas¹ makes it impossible to obtain geographically comparable birth and death data for the entire United States before 1933. However, the rates for the expanding groups of registration States are approximations of national rates, and general comparisons over a long period of years can be made. Beginning 1933, the birth and death registration areas have comprised the entire United States, including Alaska beginning 1959 and Hawaii beginning 1960. National statistics on fetal deaths were compiled for 1918 and annually since 1922.

Prior to 1951, birth statistics were the result of a complete count of the records received in the Public Health Service. Since 1951, they have been based on a 50-percent sample of all registered births (except for 1955 when they reverted to a complete count and for 1967 when they were based on a 20-50 percent sample).

Current provisional death statistics are based on a 10-percent sample of death certificates filed in State vital statistics offices. Fetal deaths (stillbirths) and deaths among Armed Forces abroad are excluded.

Mortality statistics are compiled in accordance with World Health Organization regulations, which specify that member nations classify causes of death according to the *International Statistical Classification of Diseases, Injuries, and Causes of Death*. The current classification, "Seventh Revision of the International Lists," has been used in the United States beginning with 1958.

Marriages and divorces.—National collections of statistics on marriages and divorces in the United States were made for various years from 1867 to 1940 and for each year since 1944. Estimates have been made for intervening years and for years in which collections were not complete. A marriage-registration area was established by the Public Health Service in 1957, and a divorce-registration area in 1958. At the beginning of 1970, the marriage-registration area covered 39 States and 3 independent registration areas; the divorce-registration area, 28 States and 1 independent area.

Vital statistics rates.—Vital statistics rates computed by the Public Health Service are based upon the enumerated population figures as of April 1 for 1940, 1950, and 1960 and upon the estimated midyear population figures for other years, provided by the Bureau of the Census unless otherwise noted.

Medical care.—Historical data on national health expenditures, by source of public and private funds and by object of expenditure, are compiled by the Social Security Administration and appear annually in the *Social Security Bulletin*. From this series

¹ For coverage of these areas, see *Historical Statistics of the United States, Colonial Times to 1867*, series B 1-5.

are derived estimates of total personal health care expenditures, private consumer expenditures for health services, and those portions of such expenditures met by private health insurance and third-party payments, which include private health insurance benefit payments, government expenditures, and philanthropy, and the expenditures of employers to maintain in-plant health facilities.

Data on physicians, dentists, nurses, and other providers of health services are published in the *Health Manpower Source Book Series*, Public Health Service Publication No. 263. A comprehensive compilation of data on some 35 categories of health occupations and three categories of inpatient health facilities is presented in the annual *Health Resources Statistics*, Public Health Service Publication No. 1509.

Statistics of hospitals are obtained from the American Hospital Association's annual survey of hospitals. They are published annually in *Hospitals*, Guide Issue, and cover all hospitals accepted for registration by the Association. To be accepted for registration, a hospital must meet certain requirements, as follows: It must have at least 6 beds for the care of nonrelated patients for an average stay of over 24 hours per admission; be constructed and equipped to insure safety of patients and to provide sanitary facilities for their treatment; have an organized medical staff, registered nurse supervision, and nursing care for round-the-clock patient care; maintain clinical records on all patients and submit evidence of patient care by doctors; provide minimal surgical and obstetrical facilities or relatively complete diagnostic and treatment facilities; have diagnostic X-ray and clinical laboratory services readily available; and offer services more intensive than those required merely for room, board, personal services, and general nursing care.

The Social Security Administration is another source of data for hospitals and nursing homes. These data, available by State for such institutions and for extended care facilities and home health agencies, are based on the Health Insurance for the Aged program (Medicare) begun in 1966. They differ from those of the American Hospital Association and other sources because they are limited to the facilities meeting Federal eligibility standards for participation in Medicare.

Data on persons receiving inpatient care in short-stay hospitals, resident patients in mental hospitals, and residents of homes for the aged and chronically ill are collected by the Public Health Service and presented in *Vital and Health Statistics*, Series 12 and 13; data on patient visits to physicians, dentists, and other providers of health care are furnished in Series 10.

Another aspect of medical care is provided by statistics on patients in hospitals for mental disease, psychiatric services of general hospitals, outpatient psychiatric clinics, and institutions for the mentally retarded. From 1923 to 1946, data on mental health were collected annually by the Bureau of the Census. Since 1946 they have been issued by the Public Health Service. From 1947 through 1966, hospital data appeared annually in *Patients in Mental Institutions* and, from 1959 through 1966, clinic data appeared in *Data on Patients of Outpatient Psychiatric Clinics in the United States*. Beginning with 1967, these data appear in *Mental Health Statistics*, Series A—*Mental Health Facilities Reports*.

Statistics on institutional population based on the 1960 Census of Population include information on number and characteristics of persons in long-term hospitals, in homes and schools for the mentally and physically handicapped, and in homes for the aged and dependent (*U.S. Census of Population, 1960*, PC(2)-8A).

Illness and disability.—Annual data on notifiable diseases, based on reports from State health departments, are compiled by the Public Health Service at its National Communicable Disease Center in Atlanta, Georgia, and published as a supplement to its *Morbidity and Mortality Weekly Report*. The list of notifiable diseases is revised biennially and includes those which, by mutual agreement of the States and the Public Health Service, are communicable diseases of national importance.

General health statistics, including morbidity, disability, and the utilization of health services, are provided by the various surveys that make up the National Health Survey of the Public Health Service. They are published in *Vital and Health Statistics*, Series 10 and 11. Morbidity statistics for members of the Armed Forces are prepared and published by the Departments of the Army, Navy, and Air Force. The Department of Labor compiles statistics of industrial injuries (see p. 237).

Nutrition.—Statistics on the annual per capita consumption of food and its nutrient value are estimated by the Department of Agriculture and published quarterly (nutrient value, annually) in the *National Food Situation*. Recent information has also been published in *Food Consumption, Prices, and Expenditures*, Agricultural Economics Report No. 138, July 1968, and its *Supplement for 1968*, issued in January 1970. Data on Federal food distribution programs, quantity and cost of food commodities distributed, value of food stamps issued, and number of persons participating in the programs are published annually in *Agricultural Statistics*.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

No. 53. LIVE BIRTHS, DEATHS, MARRIAGES, AND DIVORCES: 1910 TO 1969

[Prior to 1960, excludes Alaska and Hawaii. See also *Historical Statistics, Colonial Times to 1957*, series B 7-9, B 129 B 176, and B 178]

No. 61. NET AND GROSS REPRODUCTION RATE, BY RACE: 1905 TO 1968

[Prior to 1950, excludes Alaska, and 1960, Hawaii. Prior to 1960, based on births adjusted for underregistration; beginning 1960, on registered births. Rates computed using annual vital statistics life tables and population estimates by age, except as noted for earlier years. A net reproduction rate of 1,000 means that each generation would just replace itself, if birth and death rates of a specified period were to continue indefinitely, in the absence of net immigration. A rate above 1,000 implies a potentially gaining population, and a rate below 1,000, a potentially declining population. A gross reproduction rate of 1,000 means that if all women born at the beginning of a generation were to live through their reproductive period and continue birth rates existing at the time of their birth, they would barely reproduce themselves, assuming no migration from outside the area. A comparison of the net rate with the gross rate affords an indication of the loss sustained by the potential childbearing population through mortality. See also *Historical Statistics, Colonial Times to 1957*, series B 31-36]

PERIOD OR YEAR	NET RATE			GROSS RATE		
	Total	White	Negro and other	Total	White	Negro and other

S Does not meet publication standards because reporting less than 90 percent complete.

¹ Preliminary. Represents either marriages performed, licenses issued, or intentions filed. U.S. total based on receipts corrected for observed differences between preliminary and final data. State data are not corrected in this manner.

² Per 1,000 population. Based on total population residing in area; population enumerated as of Apr. 1 for 1950 and 1960, estimated as of July 1 for other years. ³ Includes reported annulments.

⁴ 1950 excludes Alaska and Hawaii. ⁵ Estimated. ⁶ Incomplete. ⁷ Marriage licenses.

— Represents zero.

¹ Excess of patients released alive from hospital (direct discharges plus leave placements) over those returning to hospital; minus sign (—) denotes excess of deaths.

² Excludes Veterans Administration clinics and is based on 84% clinics reporting.

³ Differs from figure shown in table 99 because based on subsequent unpublished data.

⁴ No institutions for mentally retarded; patients requiring hospitalization receive care at State mental hospital.

Source: Dept. of Health, Education, and Welfare, Public Health Service; *Mental Health Statistics—Current Facility Reports and Patients in Mental Institutions*.

No. 101. PERSONNEL AND MAINTENANCE EXPENDITURES OF MENTAL HOSPITALS, OUTPATIENT PSYCHIATRIC CLINICS, AND PUBLIC INSTITUTIONS FOR THE MENTALLY RETARDED: 1940 TO 1966

- Represents zero.

D Withheld to avoid disclosing figures for individual producers.

¹ Excludes allylic and heterocyclic compounds for 1960; beginning 1964, excludes methionine.

² Excludes benzenoid compounds. ³ Includes some sales which were inadvertently reported as bulk sales through 1965. ⁴ Excludes small amounts of benzenoid barbiturates.

⁵ Includes most, but not all, choline salts. ⁶ Choline chloride only.

⁷ For human or veterinary use only through 1960. Sales of mixture and dosage-form products included through 1964; excluded thereafter.

⁸ Beginning 1964, excludes derivatives other than salts. ⁹ Excludes derivatives.

¹⁰ Includes benzenoid skeletal muscle relaxants; excludes small amounts of nonbenzenoid tranquilizers.

¹¹ Excludes K vitamins through 1960.

Source: U.S. Tariff Commission; *Synthetic Organic Chemicals, U.S. Production and Sales*.

NO. 104. DAYS OF DISABILITY, BY TYPE AND SEX, AND FOR ACUTE CONDITIONS: 1960 TO 1968

[In millions, except as indicated. 1960 and 1965, for years ending June 30; thereafter, calendar years. Data refer to civilian noninstitutional population. Based on sample and subject to sampling variability; see source for detailed explanation]

¹ A day when a person cut down on his usual activities for the whole day because of illness or injury. Includes bed-disability, work-loss, and school-loss days.

² A day when a person was kept in bed either all or most of the day because of illness or injury. Includes those work-loss and school-loss days actually spent in bed.

³ A day when a person lost the entire work day because of illness or injury. Computed for persons 17 years of age and over in the currently employed population, defined as those who were working or had a job or business from which they were not on layoff during the 2-week period preceding the week of interview.

⁴ A day when a child lost the entire school day because of illness or injury. Computed for children 6-16 years of age.

⁵ Excludes all conditions involving neither restricted activity nor medical attention. Contains some duplication, since time lost because of several concurrent conditions is counted under each contributing condition.

No. 107. SPECIFIED REPORTABLE DISEASES—CASES REPORTED: 1945 TO 1968

[Prior to 1960, excludes Alaska and Hawaii, except for tuberculosis. Figures should be interpreted with caution. Although reporting of some of these diseases is incomplete, the figures are of value in indicating trends of disease incidence. See *Historical Statistics, Colonial Times to 1967*, series B 275-281, for rates for selected diseases]

No. 108. HEART DISEASE IN ADULTS, BY DIAGNOSIS AND SEX: 1960-62

[Excludes Alaska and Hawaii. Prevalence data are based on direct examination from October 1959-December 1962. Refers to civilian noninstitutional population aged 18-79 years. Contains some duplications, since a large number of persons with heart disease had more than one manifestation of the disease. "Other" category is upper limit and consists of adults with rheumatic, syphilitic, and congenital heart diseases, and persons with "nonspecific" though definite heart disease. Based on a sample and subject to sampling variability; see source for detailed explanation]

No. 119. NUTRITION—NUTRIENTS AVAILABLE FOR CIVILIAN CONSUMPTION PER CAPITA PER DAY: 1940 TO 1969

[Prior to 1960, excludes Alaska and Hawaii. Based on Bureau of the Census estimated population as of July 1. Computed on basis of estimates of apparent civilian consumption (retail basis) including consumption from home gardens. No deductions have been made in nutrient estimates for loss or waste in home or for destruction or loss of nutrients during preparation of food. Deductions have been made for inedible refuse. Data include quantities of iron, thiamine, riboflavin, and niacin added to flour and cereal products; quantities of vitamin A value added to margarine and milk of all types; quantities of ascorbic acid added to fruit juices and drinks. See also *Historical Statistics, Colonial Times to 1867*, series G 546-551]

Federal cost.....mil. dol.....	(X)	(X)	(X)	33	65	106	173	229

X Not applicable.

¹ Represents cost to the Federal Government of the commodity as delivered to the State distributing agency.

² Comprises elementary and secondary schools. See also headnote, table 126.

³ Refers to subsidy payments by the Federal Government; excludes administrative costs.

⁴ Initiated in September 1964 to increase the consumption of fluid milk in schools and child-care institutions.

No. 122. FEDERAL FOOD PROGRAM, FOOD DONATED TO NEEDY FAMILIES—CITIES AND COUNTIES PARTICIPATING, RECIPIENTS, QUANTITY, AND COST: 1950 TO 1969

[For years ending June 30. Participation data for peak month. Prior to 1964, excludes Hawaii, and 1968, Alaska]

NA. Not available. ¹ Includes Indian reservations.

² Unemployed and low-income persons except those on regular public assistance rolls.

³ Total cost to Federal Government including commodity cost, warehousing, processing, repackaging, miscellaneous handling charges, and transportation costs to designated carload receiving points within the States.

Source of tables 121 and 122: Dept. of Agriculture, Food and Nutrition Service. In annual report, *Agricultural Statistics*, and unpublished data.

No. 123. COST OF U.S. DEPARTMENT OF AGRICULTURE ECONOMY AND LOW-COST FOOD PLANS: 1969

[As of March. The cost of the Economy Food Plan is often used as the minimum price for purchasing an adequate diet. However, the Department of Agriculture also states that the cost of this plan is not a reasonable measure of basic money needs for a good diet and suggests that public assistance agencies recommend a higher money allowance. Many welfare agencies base their food cost standards on the USDA Low-cost Food Plan which costs about 25 percent more than the Economy Plan. For composition of regions, see fig. 1, p. xii]

REGION	ONE-PERSON HOUSEHOLD MONTHLY COST ¹		FOUR-PERSON HOUSEHOLD MONTHLY COST ²		EIGHT-PERSON HOUSEHOLD MONTHLY COST ³	
	Economy plan	Low-cost plan	Economy plan	Low-cost plan	Economy plan	Low-cost plan
United States.....	\$23.70	\$35.90	\$99.90	\$124.80	\$166.80	\$209.00

- Represents zero. NA Not available. X Not applicable.

¹ As defined by Dept. of Agriculture, contains less than acceptable levels of 7 nutrients: Vitamins A and C, hemoglobin, plasma protein, serum albumin, urinary riboflavin, and thiamine.

² Based on Bureau of the Census estimates of total households as of July 1.

³ As of June for food stamps and February for needy families.

⁴ Based on Bureau of the Census estimates of population as of July 1.

⁵ Estimated at 3/4 of 1960 census data since number of persons below poverty level decreased by 1/4 from 1960 to 1968. Covers persons living in families unable to purchase a marginal diet (based on Dept. of Agriculture Economy Food Plan costs) unless they spend more than one-third of their income, including all welfare payments, on food.

⁶ Cost of economy diet for a family of four if one-third of total income is spent for food. See footnote 5.

Section 3

Immigration and Naturalization

This section presents statistics related to immigration, naturalization, and alien registration. The principal source of these data is the *Annual Report* of the Immigration and Naturalization Service. Immigration statistics are prepared from entry documents. Statistics for naturalizations are compiled from periodic reports by courts conducting such proceedings, and those for alien registrations are compiled from alien address report cards.

The continuous record of immigration into the United States began in 1819, under the Act of March 2. Immigration statistics were compiled by the Department of State from 1820 to 1874 and by the Treasury Department from 1867 to 1895. Since 1892 there has been a separate office or bureau of immigration, now a part of the Immigration and Naturalization Service. Information on immigration and naturalization has been included in annual reports issued by the Office of Immigration from 1892 to 1932, the Secretary of Labor from 1933 to 1940, the Attorney General for 1941, and the Immigration and Naturalization Service since then.

Immigration.—Since 1820 the official immigration statistics (see table 128) have changed considerably in coverage. The early figures were for arrivals at Atlantic and Gulf coast seaports of the United States. Pacific coast arrivals were first reported in 1850. Aliens arriving at Canadian seaports en route to the United States were included after 1893. The reporting of arrivals over the land borders began in 1904. Prior to 1868, arriving alien passengers were recorded; thereafter, aliens coming for temporary stay were omitted. The passage of the Act of 1891 increased the number of excludable classes. The basis of reporting was then changed from arrivals to admissions, omitting aliens not permitted to enter the United States, except for the period 1895 to 1897 when the reporting of arrivals was resumed.

Immigrant.—An immigrant is defined as an alien, other than a returning resident alien, admitted for permanent residence. Prior to July 1, 1968 (see p. 90) quotas limited immigration only from Eastern Hemisphere countries. Until 1920 there was only a qualitative limitation into this country. The 1921 Act placed the first numerical ceiling upon immigration. Each country's quota was to be 3 percent of the number of people born in that country who were residing in the United States as reported by the 1910 Census of Population.

In 1924, a new formula was enacted for computing a country's quota, based on 2 percent of the number of people born in that country who were residing in the United States as determined by the 1890 Census of Population. The 1924 Act also provided that, beginning July 1, 1929, the quota of any country shall have the same ratio to 150,000 as the number of persons of that national origin living in the United States had to the total population living in the United States as determined from the 1920 Census of Population. This Act also established minimum quotas of 100 for all quota areas.

The Immigration and Nationality Act of 1952 simplified the national origins formula of the 1924 Act by basing the annual quota on a flat one-sixth of 1 percent of the population in the 1920 Census. Quotas revised by Presidential proclamation totaled 158,261 in 1967 and 1968 (see table 127).

Effective December 1, 1965, quotas under the 1952 Act were continued but made subject to a new preference system. Moreover, at the end of each year the numbers allocated to each country which are not used are transferred to an immigration pool and made available to preference immigrants who cannot obtain visas because the quota for their country is exhausted. The allocations from the pool and from existing numbers may not exceed 170,000.

Also effective December 1, 1965, the "quota immigrant" of the 1952 Act is called "immigrant" and the "nonquota immigrant" is called "immediate relative" or "special immigrant." Immediate relatives of United States citizens are parents (if the citizen is over age 21), spouses, and children under age 21. They are exempted from the numerical ceilings.

Special immigrants include returning resident aliens (although these are often classed as nonimmigrants for statistical purposes), certain former citizens, and certain other specified groups. The spouses and children under age 21 of the following groups are included if they are accompanying or following to join such immigrants: Western Hemisphere natives, retired employees of our government abroad, and ministers of religion. Special immigrants are also exempt from the numerical ceilings.

Effective July 1, 1968, a limit of 170,000 was set for immigrants who are natives of the Eastern Hemisphere, on a first-come first-served basis by country, with a 20,000 maximum on natives of any one country. Selection is made on the basis of preferences favoring family reunification and persons with skills and talents needed here. Also made effective then was a ceiling of 120,000 on Western Hemisphere natives on a first-come first-served basis with no limitation on the number from any one country. "Immediate relatives" and "special immigrants" other than those in the latter category because of Western Hemisphere birth continue to be exempt from numerical ceilings.

Nonimmigrant.—Nonimmigrants are aliens who enter the United States for temporary periods. Included in the nonimmigrant class are foreign government officials, their families, attendants, servants, and employees; temporary visitors for business or pleasure; aliens in continuous transit through the United States; students; and others. Resident aliens returning from a temporary stay abroad are often classed as nonimmigrants, although they are legally special immigrants. Certain temporary admissions such as of persons in possession of border-crossing identification cards are not included in the nonimmigrant totals.

Displaced persons and refugees.—The Displaced Persons Act of 1948 was the first of eight special acts passed between 1948 and 1960 that provided for the admission of refugees from Communist-dominated countries, victims of natural calamities, and orphan children without regard to the usual numerical ceilings.

Status of Cubans.—Effective November 2, 1966, Cubans admitted or paroled into the United States after January 1, 1959, and present in the United States for at least 2 years may obtain permanent resident status. A record of the alien's admission for permanent residence will be created as of 30 months prior to filing of an application or the date of his last arrival in the United States, whichever is later. Cuban immigrants who have been admitted for permanent residence may also have the date of admission adjusted to a date 30 months prior to the date of this Act.

Alien registration.—The Immigration and Nationality Act provides that each alien who is required to be registered under the Alien Registration Act of 1940, and who is in the United States on January 1, must report his current address to the Attorney General during the month of January. Alien address report cards are distributed through the post offices of the United States or the local offices of the Immigration and Naturalization Service.

Naturalization.—Naturalization statistics for the United States began with the fiscal year 1907. Prior to this time each court kept records of naturalizations but no national data were compiled. The Act of June 29, 1906, effective September 27, 1906, provided for periodic returns by all courts conducting naturalization proceedings, and for the filing with a central Federal agency of a duplicate copy of each declaration of intention and petition for naturalization filed, and of each certificate of naturalization issued. Naturalization statistics were originally compiled by the Bureau of Immigration and Naturalization of the Department of Commerce and Labor, now the Immigration and Naturalization Service of the Department of Justice.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

Section 4

Education

This section presents data concerning the enrollment, personnel, level, extent, and finances of formal education in the United States. The chief sources are the decennial Census of Population and the Current Population Survey, both conducted by the Bureau of the Census (see text, p. 1), and annual, biennial, and other periodic surveys conducted by the Office of Education. The Census of Population has included data on school enrollment since 1840 and on educational attainment since 1940. The Current Population Survey has reported on school enrollment annually since 1945 and on educational attainment and illiteracy periodically since 1947. The Office of Education has collected statistical information on education since 1870. Currently its annual *Digest of Educational Statistics*, first issued in 1962, includes data on pupils, staff, finances, and organization at elementary, secondary, and college levels. *Preprimary Enrollment of Children Under Six*, issued annually since 1965, provides data on 3-, 4-, and 5-year-olds in nursery schools and kindergartens. Projections of enrollment, graduates, teachers, and expenditures appear in *Projections of Educational Statistics*, issued annually since 1964.

Other regular sources of education data include special studies of the Office of Education, publications of the National Education Association, and annual or biennial reports of education agencies in individual States. The Office of Education's reports, *Federal Funds for Education*, contain detailed data on Federal expenditures for education. Administrative statistics on programs concerned with the distribution of Federal funds are issued by the agencies responsible. The quinquennial Census of Governments, conducted by the Bureau of the Census, provides data on school district finances. Reports published by the Bureau of Labor Statistics contain data relating employment experience to educational attainment. Special studies by the National Science Foundation present statistics on scientists and technicians. Similar studies by the National Institutes of Health cover medical fields. Data on vocational training are available in *Vocational and Technical Education*, issued annually by the Office of Education.

Types of data.—The statistics in this section are of two general types. One type, exemplified by data from the Bureau of the Census, is based on direct questioning of individuals to obtain information about their own and their families' education. Tabulations of this type of data relate to school enrollment and level of education attained, classified by age, sex, and other characteristics of the population. The second type, exemplified by data from the Office of Education and the National Education Association, is based on reports from administrators of educational institutions and of local and State agencies having jurisdiction over education. This type of data relates to school enrollment, attendance, staff, and finances for the Nation, individual States, and local areas, by institutional characteristics.

State laws.—Although all States except Mississippi have requirements that children attend school, State laws vary as to the ages and circumstances of compulsory attendance. In the majority of States, the laws require that formal schooling begin by age 7 and continue to age 16.

Schools.—The Office of Education defines a "school" as "A division of the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant, as is the case when the elementary and secondary programs are housed in the same school plant."

The basic Office of Education statistics for elementary and secondary schools are concerned primarily with the local school systems serving the general population. Data from other types of schools are secured from time to time. School enrollment statistics of the Bureau of the Census are based on attendance or enrollment in any regular school within a given period; educational attainment statistics are based on the highest grade completed by an individual. "Regular" schools include public and private nursery schools, kindergartens, graded schools, colleges, universities, and professional schools. "Public" schools are schools controlled and supported by local, State, or Federal governmental agencies; "private" or "nonpublic" schools are those controlled and supported mainly by religious organizations or by private persons or organizations. Neither the Office of Education nor the Bureau of the Census regularly includes specialized vocational, trade, or business schools, residential schools for exceptional children, and correspondence schools. Office of Education enrollment data include kindergartens and publicly financed nursery schools; Census enrollment data include kindergartens and all nursery schools. At the higher education level, the basic Office of Education statistics and the Bureau of the Census enrollment statistics are concerned with institutions granting degrees or offering work acceptable for degree-credit, such as junior colleges. Statistics for certain other types of institutions beyond the high school, such as those offering organized occupational curriculums of nondegree character, are also collected by the Office of Education.

The Bureau of the Census defines "elementary" schools as including grades 1 through 8; "high" schools as including grades 9 through 12; and "colleges" as including junior or community colleges, regular 4-year colleges, and graduate or professional schools. Statistics reported by the Office of Education and the National Education Association by type of organization, as elementary level and secondary level, may not be strictly comparable with those from the Bureau of the Census because the grades included at the two levels vary, depending on the organization of junior high schools. The trend is for the enrollment in grades seven and eight to shift from an elementary to a secondary organization, with resultant changes in grade distribution.

School year.—Except as otherwise indicated in the tables, data relating to enrollment and staff refer to the school year which generally begins in September of the preceding year and ends in June of the year stated. Statistics concerning school finances are for a 12-month period, usually July 1 to June 30.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

NO. 144. PUBLIC AND PRIVATE SCHOOLS—NUMBER, BY LEVEL: 1930 TO 1968

No. 151. SCHOOL ENROLLMENT, BY SEX AND BY LEVEL: 1950 TO 1985

(In thousands, except percent. As of fall of year. Prior to 1960, excludes Alaska and Hawaii. Elementary includes kindergarten and grades 1-8; high school, grades 9-12 and postgraduates; and colleges 1-4 year college and graduate and professional school. Series shown represent projections based on different combinations of assumptions about population and enrollment rates. For basis of population projections, see headnote, table 7. Enrollment Series 1 and 2 are both based on the assumption that age-specific enrollment rates will continue to increase. Series 1 assumes a relatively rapid increase in the rates following the experience of 1950-52 to 1963-66; the projected rates are adjusted to tie in with the estimates for 1965. Series 2 assumes a more moderate increase based on an average of the projected rates in Series 1 and rates in 1965. More detailed methodology is given in source.)

No. 158. YEARS OF SCHOOL COMPLETED, BY SEX: 1957-59, 1969, AND PROJECTIONS TO 1985

[In thousands of persons 25 years old and over. As of March 1. Excludes Armed Forces in barracks. Projections are based on the age-grade specific attainment trends between 1958 and 1965. The projections assume declines in the proportions of the population aged 25-29 terminating their education at a given level, some further attainment by ages 30-34, and a continuation of past attainment ratios for older age cohorts. Series A assumes lower rates of termination than indicated by the trends from 1958-1965; Series B assumes higher rates of termination. For basis of population projections, see headnote, table 7]

No. 161. LIFETIME AND MEAN INCOME OF MALES 25 YEARS OLD AND OVER, BY YEARS OF SCHOOL COMPLETED: 1949 TO 1968

[Prior to 1961, excludes Alaska and Hawaii. Includes members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces. Figures for lifetime income based on application of appropriate life tables to arithmetic mean income, by age, as obtained for a cross section of population in each year shown]

1968, computed from ungrouped data ²	3,981	5,467	6,769	8,148	9,397	12,938

¹ Estimates based on a series of estimated mean values for specific income class intervals.² Improved methodology introduced in 1967 permits the computation of data based on actual reported amounts.Source: Dept. of Commerce, Bureau of the Census; *Current Population Reports*, Series P-60, No. 66, and unpublished data.

No. 162. YEARS OF SCHOOL COMPLETED—1940 TO 1960, AND BY STATES AND PUERTO RICO, 1960

[In thousands of persons 25 years old and over, except medians. Prior to 1960, excludes Alaska and Hawaii. 1950 estimates based on 20-percent sample of persons; 1960, on 25-percent sample of households; see source for sampling variability. For definition of median, see preface. See also *Historical Statistics, Colonial Times to 1957*, series H 395, for medians by age group]

- Represents zero. NA. Not available.

¹ For 1900, enumerated population as of June 1; for 1960, enumerated population as of Apr. 1; for all other years, estimated population as of July 1 of preceding year (1919, 1939, etc.). Excludes Armed Forces abroad.

² Includes librarians and other nonsupervisory instructional staff. Prior to 1940, figures represent number of persons employed rather than number of positions. ³ Beginning 1960, estimated.

⁴ Through 1960, includes community services. Beginning 1960, not comparable with prior years.

⁵ Comprises summer schools, community colleges, adult education, and, beginning 1960, community services.

⁶ Excludes capital outlay by nonschool agencies.

⁷ Based on current expenditure allocable to pupil costs, capital outlay, and interest.

⁸ Excludes current expenditures not allocable to pupil costs. * Includes interest.

No. 176. ACHIEVEMENT TESTS—MEDIAN SCORES FOR STUDENTS IN GRADES 1 AND 12, BY RACE OR ETHNIC GROUP: 1965

[As of fall. For definition of median, see preface. Estimates based on survey of public elementary and secondary schools. Represents results of standard achievement tests of such skills as reading, writing, calculating, and problem solving. Scores on each test were standardized so that the average over the national sample equaled 50 and the standard deviation equaled 10. This means that about 16 percent of all students would score below 40 and about 16 percent above 60]

GRADE AND TYPE OF TEST	White	Negro	Puerto Ricans	Indian Americans	Mexican Americans	Oriental Americans
Grade 1:						
Nonverbal.....	54.1	43.4	45.8	53.0	50.1	55.6

NA Not available. X Not applicable. ¹ Represents institutions reporting staff and enrollment. Institutions reporting income and expenditure numbered 1,609. ² Includes regular, administrative, extension service, correspondence, and organized research staff. For 1966 and 1968, represents total professional staff. Beginning 1960, represents total number of different persons (not reduced to full-time basis). 1940 and 1950 data are for academic year; thereafter, for first term ending in year stated. ³ Estimated.

⁴ Includes extension credit enrollment. ⁵ Includes nondegree-credit extension and correspondence enrollment.

⁶ Includes grounds, buildings, equipment, and, except for 1966 and 1968, unexpended plant funds.

⁷ All funds other than national defense and student loan funds; 1966 data represent endowment only.

Section 5

Law Enforcement, Federal Courts, and Prisons

This section presents data on crimes, arrests, Federal court cases, the legal profession, Federal and State prisoners, and the use of the death penalty. The chief sources of data on these subjects are: *Uniform Crime Reports for the United States*, issued annually by the Federal Bureau of Investigation; the *Annual Report of the Director and Special Reports on Federal Offenders and Persons Under the Supervision of the Federal Probation System*, issued by the Administrative Office of the U.S. Courts; and *Statistical Report*, an annual review of the Federal prison system, and *National Prisoner Statistics*, a series of periodical reports, both issued by the Bureau of Prisons.

In addition, limited information concerning juvenile delinquency and the operation of juvenile courts is collected by the Social and Rehabilitation Service of the Department of Health, Education, and Welfare. Statistics on lawyers are compiled by the American Bar Foundation, Chicago, Illinois.

Other recent reports on subjects in this section are: *The Challenge of Crime in a Free Society*, a comprehensive survey of crime and criminal justice issued in 1967 by the President's Commission on Law Enforcement and Administration of Justice; the *Report of the President's National Advisory Commission on Civil Disorders*, issued in 1968 and containing an analysis of the racial disorders in major cities during 1967; the various Task Force Reports of the National Commission on the Causes and Prevention of Violence, issued in 1969; *Crime Against Small Business*, issued in 1969 by the Small Business Administration; and the annual *Criminal Justice Expenditure and Employment for Selected Large Governmental Units*, first issued for the 1967 fiscal year, by the Bureau of the Census.

Law enforcement and legal jurisdiction.—Law enforcement is for the most part a function of State and local officers and agencies. The U.S. Constitution reserves general police powers to the States. By act of Congress, Federal offenses include only offenses against the U.S. Government and against its employees while engaged in their official duties, and offenses which involve the crossing of State lines or an interference with interstate commerce. Consequently, criminal offenses such as murder, robbery, burglary, theft, assault, and rape are violations of State laws unless they involve Federal property or a Federal officer while engaged in his official duties, or unless they occur in Federal territories or reservations or on the high seas. Excluding the military, there are 52 separate criminal law jurisdictions in the United States: 1 in each of the 50 States, 1 in the District of Columbia, and the Federal jurisdiction. Each of these has its own criminal law and procedure and its own law enforcement agencies. Yet the system of law enforcement is quite similar among the States, although there are often substantial differences in the penalties for like offenses.

Law enforcement can be divided into three parts. The first covers the activities of the police agencies, namely, the investigation of crimes and the arrest of persons suspected of committing them. This function involves municipal police, county police, State police, sheriffs, constables, marshals, Federal agents, and many kinds of special officers. The second phase is the prosecution of those charged with criminal offenses to determine whether they are in fact guilty. The agencies concerned include the courts, justices of the peace, municipal, State, and Federal grand juries, and prosecuting court officers. The third division of administration is concerned with the punishment or treatment of those convicted of crime. While the courts usually determine the sentence after conviction, the penalty is enforced by the prison, reformatory, or jail, or by probation or parole officials.

Crime.—The Federal Bureau of Investigation, through its Uniform Crime Reporting Program, receives monthly and annual reports on a voluntary basis from law enforcement agencies throughout the country. Each month, city police, sheriffs, and State police file reports on the number of offenses that become known to them in the following crime categories—murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny (\$50 and over in value), and auto theft. These seven categories are the basis of the FBI's Crime Index, a measure of the extent, fluctuation, and distribution of serious crime in the United States. The monthly reports also contain data on the number of these crimes cleared by arrest and certain other analytical data pertaining to specific crime categories. Annual reports provide summaries of data concerning persons arrested for all criminal offenses, by age, sex, and race of the offender, as well as an accounting of the number of persons formally charged and their disposition. The law enforcement agencies currently reporting to the FBI represent 92 percent of the national population.

In summarizing and publishing crime data, the FBI does not vouch for the validity of the reports it receives, but presents the data as information useful to persons concerned with the problem of crime and criminal-law enforcement. The FBI is the only agency which collects such data nationally on a regular basis.

Courts.—Court statistics on criminal offenses and the outcome of prosecutions are incomplete for the country as a whole although data are available for many States individually. The only national compilations of such statistics were made by the Bureau of the Census from 1932 to 1945. At no time, however, were there more than 32 States involved in the reporting system.

Comprehensive information on the business of the Federal courts is collected by the Administrative Office of the U.S. Courts and is published in the *Annual Report of the Director*. The bulk of civil litigation in the country is commenced and determined in the various State courts. Only when the U.S. Constitution and acts of Congress specifically confer jurisdiction upon the Federal courts may civil litigation be heard and decided by these courts. Whether a State court or a Federal court has jurisdiction over a particular civil action is often difficult to determine. Generally, the Federal courts have jurisdiction over the following types of cases:

(1) Suits or proceedings by the United States; (2) Suits or proceedings against the United States; (3) Civil actions between private parties arising under the Constitution, laws, or treaties of the United States; (4) Civil actions between private litigants who are citizens of different States; (5) Civil cases involving admiralty, maritime, or prize jurisdiction; (6) All matters and proceedings in bankruptcy.

The Federal courts of original jurisdiction are known as the U.S. district courts. One or more of these courts is established in every State and one each in Puerto Rico, the Virgin Islands, the Canal Zone, and Guam. Appeals from the district courts are taken to intermediate appellate courts of which there are 11, known as U.S. courts of appeals. The Supreme Court of the United States is the final and highest appellate court in the Federal system of courts.

Prisoners.—Statistics of prisoners committed to penal institutions have been collected and published for a longer period of time than have other criminal statistics. Data on prisoners in Federal and State prisons and reformatories were collected annually by the Bureau of the Census until 1950 when this work was transferred to the Bureau of Prisons. Summary statistics covering persons received and discharged from State prisons and reformatories and from Federal prisons and persons executed in the United States under civilian authority are now published periodically by the Bureau of Prisons in *National Prisoner Statistics* and in its annual *Statistical Report*. Also, nearly every State publishes annual data either for its whole prison system or for each separate State institution.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

NO. 210. CRIMES AND CRIME RATES, BY TYPE: 1960 TO 1969

No. 214. GRIEVANCES IN CITIES WHERE CIVIL DISORDERS OCCURRED: 1967

[Based on surveys made in 20 cities where civil disorders occurred. Grievances evaluated as to significance in each city and rank and points assigned to the 4 most serious, as follows: 4 points for 1st place, 3 for 2d, 2 for 3d, and 1 for 4th. Total points for each grievance category represents number of cities in which it was ranked among the top 4 multiplied by the number of points. Thus, a 4-point grievance assigned to 2 cities amounted to 8 points. Judgments of severity based on frequency of mention of a particular grievance, relative intensity with which it was discussed, references to incidents exemplifying it, and estimates of severity]

GRIEVANCE CATEGORY	Cities ¹	Points ²	GRIEVANCE CATEGORY	Cities ¹	Points ²
Police practices	14	45.5	Disrespectful white attitudes	4	6.5
Unemployment and underemployment	17	42.0	Discriminatory administration of justice	3	4.5
Inadequate housing	14	36.0	Inadequate Federal programs	1	2.5
Inadequate education	9	21.0	Inadequate municipal services	1	2.0
Poor recreation facilities and programs	8	21.0	Discriminatory consumer and credit practices	2	2.0
Ineffective political structure and grievance mechanisms	5	14.0			

- Represents zero. ¹ Where grievances were mentioned as significant.

² Where 2 grievances were judged equally serious, points for the 2 rankings were divided equally.

Prisoner Executions

161

No. 250. PRISONERS EXECUTED UNDER CIVIL AUTHORITY: 1930 TO 1969

[Includes 3 Federal executions in Alaska, 1 each in 1939, 1948, and 1950. Excludes executions by military authorities. The Army (including the Air Force) carried out 160 (148 between 1942 and 1960, 3 each in 1954, 1955, and 1957, and 1 each in 1958, 1959, and 1961). Of the total, 106 were executed for murder (including 21 involving rape), 53 for rape, and 1 for desertion. The Navy carried out no executions during the period. See also *Historical Statistics, Colonial Times to 1967*, series H 432-444]

Section 6

Area, Geography, and Climate

This section relates to area, climatologic, topographic, and hydrologic measurements of the United States. There are few official publications other than those showing area measurements (issued infrequently by the Bureau of the Census), which present area and geography statistics of national scope. However, many data are compiled for particular regions or for internal administrative purposes by such Federal agencies as the Geological Survey and the Environmental Science Services Administration.

Area.—Area measurements in the United States began with the country as a whole and developed, as mapping progressed, to measurements for the States. The annual report of the U.S. General Land Office for 1850 contained the first reference to the areas of the States and Territories, although there was no indication of the method used in obtaining the measurements. Until 1881, the General Land Office was practically the sole source of information on areas of the States and Territories.

In 1881, as part of the 1880 Census of Population, the Bureau of the Census laid the foundation for accurate and detailed area measurement in the United States. For the first time an account was given of the method and maps employed, the water bodies included, and the outer limits of the United States used as a basis for measurement. As part of the 1940 census, the Bureau published *Areas of the United States: 1940*, presenting data on the total land and water areas of the States, counties, cities, and minor civil divisions. For reports of the 1950 and 1960 censuses, adjustments in selected area figures were made for three principal reasons: Changes in boundaries, the development of water reservoirs, or improvement in maps from which area measurements are made. In 1964, the Bureau undertook measurement of the areas of cities, minor civil divisions, and census county divisions of the 1960 census. The results are published in *Area Measurement Reports, Series GE-20*, the series consisting of one report for each State and a U.S. summary. These reports include the same kinds of data as the 1940 report plus statistics on the population (total and per square mile) for each area.

Geography.—The Geological Survey, cooperating with State and local agencies, is responsible for topographic, geologic, and hydrologic maps; basic data on the quantity, quality, and movement of surface and ground water; and classification of Federal lands for mineral and waterpower potential.

The Bureau of Land Management conducts surveys and maintains records of the public domain and other public lands.

The Coast and Geodetic Survey, a component of the Environmental Science Services Administration, was authorized in 1807 and is responsible for coastal and geodetic surveys and measurement of certain physical phenomena. Its original function was to survey and chart the coast of the United States and the outlying islands and fishing banks. Currently, its primary functions are to provide charts for marine and air navigation, a basic network of geodetic control, and other basic data for engineering, scientific, commercial, industrial, and defense needs.

A civil mapping activity of the Corps of Engineers, the U.S. Lake Survey, was established in 1841. Its primary function is to furnish Great Lakes navigators with reliable charts and information on harbor facilities. It also maintains records of the fluctuating levels of the Great Lakes, the precipitation over them, and the flow through connecting rivers, and issues reports on all hydraulic problems relating to the Great Lakes.

Air pollution.—The Public Health Service first established an air sampling network in 1953. The basic sampling system of the present National Air Surveillance Network's was set up in 1967. The Network's objectives are to determine the extent and nature of air pollution and to study trends in levels of atmospheric contaminants, including particulate matter, gases, and radioactivity. Currently there are 245 sampling stations in the Network, 215 urban and 30 nonurban.

Climate.—The Environmental Science Services Administration, through the Weather Bureau and the Environmental Data Service, is responsible for collecting, processing, and publishing data on climate. It maintains about 11,000 weather stations, of which nearly 3,000 produce autographic precipitation records, about 600 take automatic or hourly readings of a series of weather elements, and the remainder record one observation a day.

Nearly all weather stations have been moved several times in their history. Consequently, the Weather Bureau uses "normal" values of temperature and precipitation for comparative purposes rather than long-term means which are derived from records taken at the different locations the stations may have had over the years.

Normal values of temperature and precipitation are based on records for the 30-year period 1931 to 1960. For stations having records for the entire 30 years from the same instrument site, monthly precipitation and temperature normals are the means of the monthly values for the 30 years; for temperature, the normal maximum and normal minimum values were used to obtain monthly normals. The annual normal temperature is obtained by dividing by 2 the sum of the annual normal maximum value and the annual normal minimum value of temperature.

For stations that did not have continuous records from the same instrument site for the entire 30 years, 1931 to 1960, the means have been adjusted to the record at the present site. In these adjustments, a "difference factor" was used for temperature and a "ratio factor" for precipitation. These factors were determined by parallel comparison, either between records at the actual station sites or through a second station that had a continuous record to compare against both sites for obtaining the resultant adjustment factors. Normals were thereafter obtained as outlined above.

This system of normals has three characteristics: (1) The 30-year period (1931 to 1960) adopted for the computations is consistent with the term of years accepted by the World Meteorological Organization for climatic normals; (2) where the station and exposure for records in a given locality have been changed, the whole record has been carefully studied and adjusted to the latest source of records and reports; (3) the normals for maximum and minimum temperatures are separately tabulated.

The degree-day normals are derived from the values for the monthly normal maximum and minimum temperatures, and computed from the standard base 65° F. The degree day has been defined as follows: "A unit, based upon temperature difference and time, used in estimating fuel consumption and specifying nominal heating load in winter. For any one day, when the mean temperature is less than 65° F., there exist as many degree days as there are Fahrenheit degrees difference in the temperature between the average temperature for the day and 65° F."

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1967*. See preface.

No. 252. TERRITORIAL EXPANSION OF THE UNITED STATES AND ACQUISITIONS OF OTHER AREAS

[Boundaries of all territories listed under "United States" were indefinite, at least in part, at time of acquisition. Area figures shown here represent precise determinations of specific territories which have been marked upon maps, based upon interpretations of the several treaties of cession, which are necessarily debatable. These determinations were made by a committee consisting of representatives of various governmental agencies in 1912. Subsequently these figures were adjusted to bring them into agreement with remeasurements made in 1960. See also *Historical Statistics, Colonial Times to 1957*, series J 1-2]

X Not applicable.

¹ Includes that part of drainage basin of Red River of the North, south of 49th parallel, sometimes considered part of Louisiana Purchase.

² Not included in total. Ceded by Spain in 1898, the Philippines constituted a territorial possession of the United States from 1898 to 1946. Granted independence as of July 4, 1946, they then became the Republic of the Philippines.

³ Ceded by Spain in 1898 and became Commonwealth of Puerto Rico by Act of Congress on July 25, 1952. See table 10.

⁴ Acquired 1898; ratified 1899.

⁵ Acquired 1899; ratified 1900.

⁶ Under jurisdiction of United States in accordance with treaty of Nov. 18, 1903, with Republic of Panama.

⁷ Leased (1914) from Republic of Nicaragua for 99 years.

⁸ Under trusteeship. See table 10, footnote 18.

⁹ Comprises following islands with gross areas as indicated: Midway (2), Wake (3), Palmyra (4), Canton and Enderbury (combined area, 27), Swan (1), Navassa (1), Baker, Howland, and Jarvis (combined area, 3), Johnston and Sand (combined area, less than 0.5), Kingman Reef, Quita Sueño Bank, Roncador Cay, and Serrano Bank (each less than 0.5), and other islands specified in table 10, footnote 8, for which area figures are not available.

— Represents zero.

¹ Figures are lengths of general outline of seacoast. Measurements were made with a unit measure of 30 minutes of latitude on charts as near the scale of 1:1,200,000 as possible. Coastline of sounds and bays is included to a point where they narrow to width of unit measure, and includes the distance across at such point.

² Figures obtained in 1939-1940 with a recording instrument on the largest-scale charts and maps then available. Shoreline of outer coast, offshore islands, sounds, bays, rivers, and creeks is included to the head of tidewater or to a point where tidal waters narrow to a width of 100 feet.

No. 262. ESTIMATED WATER USE: 1900 TO 1969, AND PROJECTIONS TO 1980

[In billions of gallons daily average. In preparing these projections, it was estimated that the population residing in the United States (conterminous area) would grow from 176.2 million in 1959 to 230.8 million in 1980, and that the index of industrial production would rise from approximately 152 to 330 in the same period. See also *Historical Statistics, Colonial Times to 1957*, series J 91-102]

No. 270. AIR POLLUTION—NATIONAL AIR SAMPLING LEVELS, SELECTED CITIES: 1968

[In micrograms per cubic meter. Air pollution is defined as the presence in the air of substances put there by the activities of man, in concentrations sufficient to interfere with comfort, safety, or health or with use and enjoyment of property. Data represent values of samples taken nationally on a biweekly basis by the National Air Pollution Control Administration. See text, p. 164]

Section 7

Public Lands, Parks, Recreation, and Travel

Statistics in this section relate to the Federal public domain and other federally owned and leased real property, Indian lands, national parks and forests, State and municipal parks, domestic and foreign travel, and other forms of recreation.

Data on public lands are published primarily by the Department of the Interior, Bureau of Land Management, in *Public Land Statistics*. Data on federally owned land and real property are collected by the General Services Administration and presented in its annual *Inventory Report on Real Property Owned by the United States Throughout the World*. The Economic Research Service of the Department of Agriculture also issues statistics on land use and land ownership.

The Department of the Interior issues various reports relating to recreation, as follows: The National Park Service publishes information on national parks in its monthly report, *Public Use of the National Parks*, and its semiannual report, *Areas Administered by the National Park Service*, which also covers sites eligible for registry as natural or national historic landmarks and nonfederally owned national historic sites. The Bureau of Outdoor Recreation administers a land and water conservation fund which has provided funds to States, counties, and cities for outdoor recreation purposes and for acquisition of new recreational lands and waters. It is responsible for maintaining a continuing inventory of public and private recreation resources and for preparing a nationwide outdoor recreation plan that will provide data on the extent and availability of such resources in relation to public needs. The first plan is due for publication in 1970 and is scheduled to be updated at 5-year intervals. The Fish and Wildlife Service compiles and releases data on sport fishing and hunting and on number and acreage of national wildlife refuges and fish hatcheries. Data for municipal parks and playgrounds, as well as for other outdoor recreational activities, are compiled by the National Recreation and Park Association, Washington, D.C., which issues its *Recreation and Park Yearbook* at 5-year intervals. The Department of Agriculture's Forest Service, in its *Annual Report of the Chief*, issues data on recreational uses of the national forests.

Figures on expenditures for recreation and on domestic and foreign travel, compiled by the Department of Commerce's Office of Business Economics, appear periodically in the monthly *Survey of Current Business*. Domestic travel data by volume and type were collected by the Bureau of the Census in its 1963 Census of Transportation and published in the *Passenger Transportation Survey*, Vol. I, *National Travel and Home-to-Work Travel*. Comparable data (excluding home-to-work travel) from the 1967 Census of Transportation, first issued in an advance report, are scheduled for final publication in *National Travel Survey*, Vol. I. Foreign travel data based on analysis of passports (see table 312, p. 207 of this book) are published in the annual *Summary of Passport Statistics*, issued by the Department of State's Passport Office.

Few statistical series are available on activities of a cultural nature—art, music, theater, etc.—and those are generally based on infrequent and incomplete studies by private agencies. The available series in this field are presented in tables 308 and 310.

Other sources of data relating to individual sports and recreational activities appear in footnotes to table 309 and in the Guide to Sources in Appendix III of this book.

Public-domain and acquired lands.—The U.S. Government acquired sovereignty over its present land area through a series of international agreements and treaties. At the time of acquisition of sovereignty over the areas involved (now 2,271 million acres) title to about 463 million acres rested in individual States and their political subdivisions or in private owners, and was not relinquished to the U.S. Government.

Title to the remaining land area passed to the U.S. Government. This area, except for lands in the District of Columbia, is known as the original public domain.

Public-domain lands or public lands are those federally owned lands to which the public land laws apply. In general, these lands include that portion of the original public domain not disposed of under the public land laws, and certain other lands declared by the Congress specifically to be public lands. In addition to the original public domain, the U.S. Government has from time to time acquired, by purchase, condemnation, and gift, tracts of land needed for public purposes. Such lands are referred to as acquired lands.

Indian lands.—Indian lands are the private landholdings of individual Indians or Indian tribes that are subject to special restrictive provisions of Federal law administered by the Bureau of Indian Affairs. They have been set aside for Indian use by treaties, congressional acts, and executive orders. Although most of these lands are in reservations for specific tribes, there are groups of scattered off-reservation allotments in individual ownership and other small tracts of land occupied by Indian groups. Recreational facilities are increasingly being located and operated by Indians on Indian reservations.

Entries, selections, patents, and certifications.—The data on entries, selections, patents, and certifications refer to transactions which involve the disposal, under the public land laws (including the homestead laws), of Federal public lands to non-Federal owners. In general, original entries and selections are applications to secure title to public lands which have been accepted as properly filed. Some types of applications, however, are not reported until the final certificate is issued. Applications become final entries (perfected entries) upon issuance of a final certificate to the applicant after he has complied fully with the requirements of the laws relating to his application. A final certificate passes equitable title to the land to the applicant. Patents are instruments which pass legal title to the land to the applicant. Certifications are issued in lieu of patents in connection with certain State selections.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface

NO. 284. AREA AND ACQUISITION OF THE PUBLIC DOMAIN: 1781 TO 1969

[In thousands of acres. Areas of acquisitions are as computed in 1912; hence do not agree with figures in square miles shown in table 282, which includes later adjustments and reflects subsequent remeasurement. See also *Historical Statistics, Colonial Times to 1957*, series J 3-9]

YEAR	Estimated area ¹	YEAR	Estimated area ¹	YEAR AND ACQUISITION	Total	Land	Inland water

1959	771,000	1959	763,000	1867, Alaska Purchase	375,296	365,482	9,814

¹ Comprises original public domain plus acquired lands. Estimated from imperfect data available for indicated years. Prior to 1959, excludes Alaska. Source, beginning 1958: General Services Administration; annual report, *Inventory Report on Real Property Owned by the United States Throughout the World*.

² Data for Louisiana Purchase exclude areas eliminated by Treaty of 1819 with Spain. Such areas are included in figures for Mexican Cession.

³ Includes 33,920 acres subsequently recognized as part of State of Texas which is not a public-domain State. ⁴ Represents drainage basin of Red River of the North, south of 49th parallel. Authorities differ as to method and exact date of its acquisition. Some hold it as part of Louisiana Purchase; others maintain it was acquired from Great Britain.

No. 292. PUBLIC LANDS—HOMESTEAD ENTRIES, 1941 TO 1969, AND VACANT LANDS, 1940 TO 1969, BY STATES

[Homestead entries for years ending June 30; vacant lands as of June 30. Excludes States with less than 500 acres in years specified. See text, p. 189. Vacant public lands are those which are unappropriated and unreserved. The former represent lands not covered by an entry; the latter, lands not reserved for some public purpose, i.e., available for entry or selection under appropriate laws. Data cover vacant public lands outside Alaska withdrawn for classification in furtherance of Taylor Grazing Act and for conservation and development of natural resources. See *Historical Statistics, Colonial Times to 1867*, series J 10, for vacant lands excluding Alaska and J 17-18 for homestead entries]

Section 8

Labor Force, Employment, and Earnings

This section presents statistics dealing with the characteristics of the economically active segment of the population, the labor force; its distribution by occupation and industry affiliation; and the supply of, demand for, and conditions of labor.

The chief sources of these data are the Decennial Census of Population conducted by the Bureau of the Census (see text, p. 1); the monthly *Employment and Earnings* and *Monthly Labor Review*, issued by the Bureau of Labor Statistics; and *Farm Labor*, issued monthly by the Statistical Reporting Service, Department of Agriculture.

Types of data.—Statistics shown in this section are of two types. One type is obtained by the "population approach" used by the Bureau of the Census in the Census of Population and the Current Population Survey (see below). This approach involves enumeration and interrogation either by interview or by mail to obtain information on employment activity from workers or members of workers' households. Each employed worker is counted only once, even though he may have held two or more jobs during a given period.

The second type of data is obtained by the "establishment approach," represented by the industry surveys of the Bureau of Labor Statistics and the surveys of the Department of Agriculture's Statistical Reporting Service. These data are based on reports from employers, i.e., farms, businesses, or industrial establishments. Such data as wages, hours worked, labor turnover, and industry affiliation of employees can be more accurately obtained from employers' records than from inquiries directed to a worker or a member of his household. Workers appearing on more than one payroll for the same time period are counted more than once in establishment statistics.

The Census of Population provides detailed data for the United States and for each State, city, and other area. It includes personal characteristics (sex, age, race, etc.) of the numbers employed and unemployed, the numbers reported in each occupation and industry, and other items. The labor force survey provides current data published in *Employment and Earnings* and in related publications series of the Bureau of Labor Statistics. Data presented include national totals, by sex, race, and age, of the number of persons in the civilian labor force, the number employed in nonagricultural industries and in agriculture, the number unemployed, and the number of nonworkers. Also provided are data on hours of work and broad occupation groups of those employed, duration of unemployment of the unemployed, and work experience and job-seeking intentions of those not in the labor force.

In addition, the Bureau of Labor Statistics, in *Employment and Earnings*, provides detailed monthly data from establishment surveys on nonagricultural employment, labor turnover, earnings, and hours worked. These data are shown for broad groupings in the *Monthly Labor Review*, which also presents statistics on wage rates, industrial relations, and output per man-hour. Certain of these data are shown for States and most standard metropolitan statistical areas (see text, p. 2). Historical statistics, in geographic detail, are shown in the Bureau of Labor Statistics Bulletin No. 1370-6, *Employment and Earnings, States and Areas, 1939-68*.

Current Population Survey.—Monthly data on the labor force are collected and compiled for the Bureau of Labor Statistics as a part of the Current Population Survey, a nationwide sample survey conducted by the Bureau of the Census. (See text, p. 1.) According to current computations, the relative sampling error for summary estimates

such as civilian labor force, total employment, and nonagricultural employment is about 0.3 percent; for agricultural employment and for unemployment, it is roughly 2 to 4 percent. The chances are about 2 out of 3 that an estimate from the sample would differ from a complete census by less than the percentage estimated above for the particular item. The chances are about 19 out of 20 that the difference would be less than twice the specified percentage and about 99 out of 100 that it would be less than $2\frac{1}{2}$ times the percentage. This sampling variability is illustrative of the variability of data based on the Current Population Survey. For further details, see the explanatory notes in the Bureau of Labor Statistics *Employment and Earnings*.

Statistics obtained from the Current Population Survey may differ from decennial census data because of sampling variability as well as differences in the training and experience of enumerators and in the enumeration procedures. For further information, see *U.S. Census of Population: 1960*, Vol. I.

Labor force.—Effective in January 1967, the lower limit for official statistics on the labor force was raised from 14 to 16 years of age. Data on employment status, collected in the Current Population Survey, relate to activity or status during the calendar week which includes the 12th of the month. Employed persons comprise all persons who, during that week, did any work for pay or profit, worked 15 hours or more as unpaid workers in a family enterprise, or did not work but had jobs or businesses from which they were temporarily absent for noneconomic reasons. Unemployed persons comprise all persons not working during the survey week who had made specific efforts to find a job within the past 4 weeks and who were available for work, and persons who were on layoff from a job or waiting to report to a new job within 30 days. A detailed discussion of the survey and its methodology appears in *Concepts and Methods Used in Manpower Statistics From the Current Population Survey* (Report No. 313), available on request from the Bureau of Labor Statistics.

Labor force data collected in the 1960 census relate to the first or second week of April for the majority of the population. "Experienced civilian labor force" refers to employed workers and unemployed workers with previous work experience.

Employment and earnings.—The monthly estimates of nonagricultural employment prepared by the Bureau of Labor Statistics are based on voluntary reports from establishments which, in March 1968, employed 12 million manufacturing workers (64 percent of total manufacturing employment at that time), 10 million workers in non-manufacturing industries except government (27 percent of the total in nonmanufacturing industries), and 7 million Federal, State, and local government employees (62 percent of the total in government). These reports are supplemented by data from other government agencies and adjusted at intervals to data from tabulations of reports under government social insurance programs. The monthly estimates exclude persons not normally on establishment payrolls, such as proprietors of unincorporated businesses, self-employed persons, domestic servants, unpaid family workers, agricultural workers, and persons in the Armed Forces. The employment data are for all employees, whether full- or part-time, who received pay for any part of the period reported.

Estimates are available on a continuous basis from 1919 for total nonfarm payroll employment and the 8 major industry divisions. Estimates for other periods are available for several hundred selected industries. Both total employment and production-worker estimates are published for 21 major manufacturing groups, 254 manufacturing subgroups, and 11 mining industries. Also, estimates for nonsupervisory workers are published for individual wholesale trade, retail trade, public utility, and some finance and service industries; estimates for construction workers are published for the contract construction industries; and 402 series are published for the employment of women.

Average weekly hours and average weekly and hourly earnings are available for over 360 series covering production and related workers in manufacturing and mining, construction workers in contract construction, and nonsupervisory workers in other selected nonmanufacturing industries. The earnings data are gross (before payroll deductions) and include overtime premiums; they exclude irregular bonuses and value of payments in kind. Hours are those for which pay was received.

Agricultural employment estimates and wage rates, obtained by means of monthly mail returns, have been issued since 1909 by the Department of Agriculture and appear monthly in *Farm Labor*. Annual estimates of persons 14 years old and over who did farm work for cash wages at any time during the year are published in *The Hired Farm Working Force*. Also reported are days employed, earnings from farm and nonfarm work, personal characteristics of hired farm workers and other pertinent information. These estimates are derived from a survey conducted once a year under contract by the Bureau of the Census for the Economic Research Service.

Output per man-hour.—The Bureau of Labor Statistics prepares and publishes annual measures of output per man-hour according to two broad concepts. The first, physical output per man-hour, deals with the relationship between production in physical units and man-hours used in production; the second, net output per man-hour, with the relationship between value added (at fixed prices) and man-hours. Both indexes measure the relationship between production and one factor of input—labor time. They do not measure the specific contribution of labor or capital nor do they measure increased efficiency resulting from technological changes or changes in production procedures.

The indexes of output per man-hour for selected industries are based on the physical output per man-hour concept; measurements relating to the total economy and various sectors are based on the net output per man-hour concept. These indexes are influenced by the divergent movements of various industries which make up the total, as well as by changes in the relative importance of these components.

Labor turnover.—Labor turnover rates are published monthly in the *Monthly Labor Review* and in *Employment and Earnings* for over 220 industries on the basis of reports from cooperating establishments employing over 11 million workers (about 57 percent of the universe surveyed). Labor turnover data are available on a monthly basis from January 1930 for manufacturing as a whole. Labor turnover rates for individual industries and industry groups are available on a continuous basis only from January 1958.

Work stoppages.—Statistics on strikes are compiled by the Bureau of Labor Statistics and include stoppages, workers involved, and man-days of idleness. Basic data are obtained from the employers and unions involved in strikes. Knowledge of strikes comes from a variety of sources, including newspapers, State employment services, and State and Federal mediation services. The Bureau prepares annual reports published in the *Monthly Labor Review* and, later, in bulletin form, giving total figures for each month of the year and analyses of strikes by industry, State, city, causes, and other classifications.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

FIG. XIV. TRENDS IN THE LABOR FORCE: 1957 TO 1970

No. 330. MARITAL STATUS OF WOMEN IN THE CIVILIAN LABOR FORCE: 1940 TO 1969

[Persons 14 years old and over through 1966; thereafter, 16 years old and over. As of March, except as indicated. Prior to 1960, excludes Alaska and Hawaii. Includes institutional population. Figures for 1940 based on complete census revised for comparability with intercensal series. Data for 1944-1969 based on Current Population Survey; see text, p. 1. Beginning 1955, figures not strictly comparable with previous years as a result of introduction into estimating procedure of 1950 census data through 1961, and of 1960 census data beginning March 1962. See table 35. See also *Historical Statistics, Colonial Times to 1957*, series D 33-35]

No. 341. PRODUCTION WORKERS, MANUFACTURING INDUSTRIES—NUMBER, EARNINGS, AND HOURS: 1950 TO 1970

[Prior to 1960, excludes Alaska and Hawaii. Workers include all full- and part-time employees who worked during, or received pay for, any part of pay period including 12th of month. Net spendable average weekly earnings represent average gross earnings less social security and Federal income taxes. Overtime defined as work in excess of either straight-time workday or workweek and paid for at time and one-half. See *Historical Statistics, Colonial Times to 1957*, series D 626-628, for related but not comparable data.]

YEAR	Workers, annual average (1,000)	Gross average weekly earnings	NET SPENDABLE AVERAGE WEEKLY EARNINGS				Average weekly hours	AVERAGE HOURLY EARNINGS

No. 343. INDEXES OF UNION WAGE RATES AND WEEKLY HOURS IN SELECTED TRADES: 1945 TO 1969

[1957-59=100. Prior to 1964, excludes Alaska. As of July 1. Indexes of rates reflect changes in minimum hourly wage scales; indexes of hours reflect changes in the negotiated straight-time weekly hours. Year-to-year changes in union scales are based on comparable quotations for each individual trade weighted by membership for current year. See *Historical Statistics, Colonial Times to 1867*, series D 642-653, for printing on 1948-49 base and other trades on 1947-49 base]

No. 345. WAGE AND BENEFIT DECISIONS—MEDIAN ANNUAL RATES OF INCREASE: 1965 TO 1969

[Percent. Excludes increases in wages resulting from cost-of-living escalator adjustments. For definition of median, see preface]

MEASURE	1965	1966	1967	1968	1969
MAJOR COLLECTIVE BARGAINING SITUATION¹					
Wage and benefit changes (packages):					
Equal timing ²	3.3	4.0	5.2	6.0	7.4
Time weighted (actual timing) ³	(NA)	4.7	5.5	6.6	8.3
Negotiated wage-rate increases averaged over life of contract:					
All industries	3.3	3.9	5.0	5.2	6.8
Manufacturing	(NA)	3.8	5.1	4.9	5.8
Nonmanufacturing	(NA)	3.9	5.0	5.9	8.5
Negotiated 1st-year wage increases:					
All industries	3.9	4.8	5.7	7.2	8.0
Manufacturing	4.1	4.2	6.4	6.9	7.0
Nonmanufacturing	3.7	5.0	5.0	7.5	10.0
WAGE INCREASES IN MANUFACTURING					
All establishments	3.7	4.2	5.3	6.0	6.2
Union establishments	3.6	4.1	5.5	6.5	6.9
Nonunion establishments	4.0	4.4	5.0	5.0	6.0

NA Not available.

¹ Contracts affecting 1,000 workers or more, except for packages. Package cost estimates are limited to settlements affecting 5,000 workers or more (10,000 in 1965). The package cost of a few settlements, affecting relatively few workers, has not been determined.

² Based on estimated increases in hourly costs at end of contract period and assumes equal spacing of wage and benefit changes over life of contract.

³ Takes account of actual effective dates of wage and benefit changes.

No. 346. PERCENT INCREASE IN AVERAGE PAY FOR SELECTED OCCUPATIONS AND IN CONSUMER PRICES: 5-YEAR PERIOD ENDING IN 1968-69

[Data based on period January 1964-January 1969, except as noted]

ITEM	Total	Average annual rate	ITEM	Total	Average annual rate
PRIVATE INDUSTRY			GOVERNMENT		
Professional, administrative, technical and clerical employees, average salaries: ¹			Police patrolmen and firefighters: ²		
Clerical and beginning technicians	21.9	4.1	Minimum annual salary scales	38.5	6.7
Entry and development professional levels, advanced technician levels, and supervisors of nonprofessional levels	26.4	4.8	Police patrolmen	39.3	6.9
Fully experienced professional working levels, supervisors of professional levels and program administrative levels	25.4	4.6	Firefighters	37.4	6.6
Factory production workers:			Maximum annual salary scales	38.4	6.7
Gross average hourly earnings	23.3	4.3	Police patrolmen	39.4	6.9
Gross average weekly earnings	26.2	4.8	Firefighters	36.8	6.5
Average straight-time hourly earnings ³	22.5	4.2	Public school teachers, average annual salaries ⁴	31.9	5.7
CONSUMER PRICES			Federal classified employees: ⁵		
Consumer price index	15.2	2.9	Basic annual salary scales	27.0	4.9
			Average annual salary rates	28.5	5.1
			Average annual salaries	32.8	5.8

¹ Covers five 12-month periods between February-March 1964 and June 1969. For further details, see *National Survey of Professional, Administrative, Technical, and Clerical Pay*, Bulletin No. 1654.

² Derived from gross hourly earnings by assuming that overtime paid for at rate of time and one-half.

³ Covers cities with 1960 population of 100,000 or more. ⁴ Relates to 5 school years ending with 1968-1969.

⁵ Covers July 1963-July 1968. Basic scales reflect only statutory changes in salaries. Average rates show effect of statutory changes and merit or upgrade salary increases; average salaries measure also effect of changes in proportion of workers in various grades.

NO. 354. INJURY-FREQUENCY RATES, 1960 TO 1968, AND SEVERITY MEASURES, 1967 AND 1968, FOR SELECTED INDUSTRIES

[Frequency rate is the number of disabling work injuries, and severity rate is the number of days disability, per 1 million employee-hours worked. Data are from the American National Standard Method of Recording and Measuring Work Injury Experience. Data are on basis of Standard Industrial Classification. See also *Historical Statistics, Colonial Times to 1967*, series D 785, for injury-frequency rates for manufacturing on old basis]

No. 359. LABOR UNIONS—FINANCIAL DATA, BY TYPE OF UNION: 1967 AND 1968

[Money figures in millions of dollars. For fiscal years ending during calendar year. Data from annual financial reports of labor organizations filed with Department of Labor under provisions of Labor-Management Reporting and Disclosure Act of 1959 which covers substantially all labor unions in the United States, except those not engaged in an industry affecting commerce, those composed entirely of public employees, and those which are State or local central bodies. Classification by type is based mainly on union's self-classification in reports filed with Department of Labor]

¹ Financial data adjusted to represent a constant universe of 48,000 local unions because financial detail could not be tabulated for all. Actual number of reporting local unions: 48,580 in 1967 and 48,573 in 1968.

² Receipts and disbursements for national, intermediate, and local unions should not be added; such a total would contain duplication due to transfer of certain monies from one type of union to another, with each type reporting the transaction.

No. 361. WORK STOPPAGES: 1950 TO 1969

[Prior to 1960, excludes Alaska and Hawaii. Excludes work stoppages involving fewer than 6 workers or lasting less than 1 day. Information obtained directly from companies and unions involved as well as from various Government labor boards, conciliation services, and other neutral parties. See also *Historical Statistics, Colonial Times to 1957*, series D 784-789 and D 774]

YEAR	WORK STOPPAGES BEGINNING IN YEAR		WORKERS INVOLVED		MAN-DAYS IDLE DURING YEAR		
	Number	Average duration (calendar days)	Number ¹ (1,000)	Percent of total employed ²	Number (1,000)	Percent of estimated working time ³	Per worker involved
1950.....	4,843	19.2	2,410	5.1	38,800	0.33	16.1
1955.....	4,320	18.5	2,650	5.2	28,200	0.22	10.7
1960.....	3,333	23.4	1,320	2.4	19,100	0.14	14.5
1962.....	3,614	24.6	1,230	2.2	18,600	0.13	15.0
1963.....	3,362	23.0	941	1.1	16,100	0.11	17.1

1968.....	5,045	24.5	2,649	3.8	49,018	0.32	18.5
1969.....	5,700	22.5	2,481	3.5	42,869	0.28	17.3

¹ Workers counted more than once if involved in more than 1 stoppage during year.

² In 1967, total employed workers were redefined to coincide with the Bureau of Labor Statistics figures for nonagricultural employment, plus agricultural wage and salaried workers. Idleness computed on this basis is lower than the former series.

³ Estimated working time computed by multiplying average number of employed workers (see footnote 2) by number of days worked by most employees.

Section 9

National Defense and Veterans Affairs

This section presents statistics on national defense and its human and financial costs; military personnel, ships, and aircraft; Selective Service operations; and various federally sponsored programs and benefits for veterans. The principal sources of these data are the annual *Selected Manpower Statistics* and other reports issued by the Office of the Secretary of Defense; annual reports of the Departments of the Army, Navy, and Air Force, the Office of Civil Defense, and the National Guard Bureau; the Selective Service System; *Annual Report of Administrator of Veterans Affairs*, Veterans Administration; and *Budget of the United States Government*, Bureau of the Budget. Data on veterans also appear in reports of the Census of Population, conducted by the Bureau of the Census.

Department of Defense.—Until 1947, the Army, Navy, and Air Force operated under independent jurisdiction, answering only to the Commander-in-Chief, the President of the United States. In 1947, the National Security Act set up the National Military Establishment, which provided for the coordination of the Army, Navy, and Air Force under a civilian Secretary of Defense. The three services remained separately administered, however, and each retained its Department status. Amendments to the Act in 1949 established the Department of Defense.

Selective Service.—The Selective Service System is responsible for the registration, classification, selection, forwarding for examination, and delivery for induction into the Armed Forces of all men required to register under the Military Selective Service Act of 1967. The act requires all men in the United States between the ages of 18 and 26 to register, and makes those between 18½ and 26 years old liable for service in the Armed Forces. It also provides exemptions from service or deferments for reasons of previous service, essential occupation, etc. Deferred persons remain liable for service until they reach 35 years of age. Selective Service is also authorized to determine availability of members of the Standby Reserve of the Armed Forces for order to active duty in time of war or national emergency.

Military reserves.—Reserve personnel of the Armed Forces consist of the Army National Guard, Army Reserve, Naval Reserve, Marine Corps Reserve, Air National Guard, Air Force Reserve, and Coast Guard Reserve. The purpose of these components is to provide trained personnel available for active duty in the Armed Forces in time of war or national emergency and at such other times as required by the national security. Whenever Congress determines that more personnel are needed for the national security than are in the regular ground, sea, and air forces, units of reserve personnel are ordered to active duty and retained as long as needed.

The National Guard has dual Federal-State responsibilities and uses jointly provided equipment, facilities, and budget support. In peace time, the National Guard is State-administered, under command of the State Governors. The State mission is to provide units organized, trained, and equipped to protect life and property and to preserve peace, order, and public safety. The Federal mission is to provide units capable and ready for mobilization in time of war or national emergency to support the Army and Air Forces. The President is also empowered to mobilize the National Guard and to use such of the Armed Forces as he considers necessary to quell insurrection in any State against its government, to enforce Federal authority in any State, and to suppress interference with the execution of State and Federal law in a State by insurrection, violence, or conspiracy.

Veterans Administration.—The Veterans Administration administers laws authorizing benefits for eligible former and present members of the Armed Forces, and for the beneficiaries of deceased former members. Veterans benefits available under vari-

ous acts of Congress include: Compensation for service-connected disability or death; pensions for nonservice-connected disability or death; vocational rehabilitation for service-connected disability; education and training; guaranty or insurance of home, farm, and business loans; U.S. Government and National Service Life Insurance; hospitalization; domiciliary care; nursing home care; out-patient medical and dental care for service-connected disability; prosthetic and other appliances; special housing and automobiles or other conveyances for certain disabled veterans; burial allowances; and educational assistance to wives, widows, sons, and daughters of deceased or totally disabled veterans.

Estimates of veterans in civil life as published by the Veterans Administration generally cover all persons with war service or service between January 31, 1955, and August 5, 1964, and include those living outside the United States. Similar data from the Bureau of the Census relate to civilian males, 14 years old and over, who live in the United States and who have served in the Armed Forces, whether in war or peacetime.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

No. 365. FEDERAL BUDGET OUTLAYS FOR NATIONAL DEFENSE AND VETERANS BENEFITS AND SERVICES: 1959 TO 1971

[In millions of dollars, except percent. For years ending June 30. Includes outlays of Department of Defense, Veterans Administration, and other agencies for activities primarily related to national defense and veterans programs. See *Historical Statistics, Colonial Times to 1957*, series Y 357-358 and Y 360, for related data]

War of 1812.....	158	93	49	53	49	16	17
Mexican War.....	147	73	64	88	64	10	14

¹ Based on expenditures of Departments of the Army and Navy to World War I and major national security expenditures thereafter. Usually the figures begin with the year the war began but in all cases they extend one year beyond the end of the actual conflict. See *Historical Statistics of the United States, Colonial Times to 1957*, series Y 351-352 and Y 358.

² To World War I, estimates are based on Veterans Administration data. For World War I, World War II, and Korean conflict, estimates are those of the 1956 report of the President's Commission on Veterans' Pensions plus 26 percent (the increase in the average value of benefits since the Commission made its report).

³ See table 405.

⁴ Estimates based on assumption that war would end by June 30, 1970.

⁵ Medium-level estimate of 200 percent (high, 300; low, 100) based on figures expressing relationship of veterans' benefits payments to original costs of other major U.S. wars.

⁶ Medium-level estimate of 20 percent (high, 30; low, 10) based on figures showing interest payments on war loans as percentage of original costs of other major U.S. wars.

¹ Awards of \$10,000 or more for supplies, services, and construction. Figures reflect impact of prime-contracting on State distribution of defense work. Often the State in which a prime contractor is located is not the State in which the subcontracted work is done. See also headnote, table 374.

² For shore-based personnel only. ³ Direct hire employees only.

Source: Dept. of Defense, Office of the Secretary; *Prime Contract Awards By State*, June 1969.

No. 377. DEFENSE-GENERATED EMPLOYMENT—STATES: 1965 TO 1968

[In thousands. Refers to measured employment in 453 major defense contractor plants surveyed jointly by Department of Defense and National Aeronautics and Space Administration plus imputed employment for unsurveyed plants. Covers all direct employment on prime contracts exceeding \$10,000 and all civilian personnel at defense installations. Includes subcontract and other indirect employment only if reported by plants surveyed]

NA. Not available. X. Not applicable.

¹ Union forces only. Estimates of the number serving in the Confederate forces range from 600,000 to 1,500,000.

² Covers period Dec. 1, 1941, to Dec. 31, 1946. ³ Covers period June 25, 1950, to July 27, 1953.

⁴ Covers period Apr. 21 to Aug. 13, 1898. ⁵ Originally organized in 1907. Established as Air Force under the Armed Services Unification Act of 1947. For World War I, known as Aviation Service and included in data for Army; for World War II, known as Army Air Forces and included in data for Army. ⁶ Included in Army.

⁷ Established Jan. 28, 1915. ⁸ Based on Army and Marines only. ⁹ Excludes Navy. See footnote 10.

¹⁰ Covers period July 1950 through January 1955. Represents Far East area only. ¹¹ During hostilities only.

¹² Covers war personnel who departed from continuous United States through December 1898.

¹³ For periods covered, see footnotes 2, 3, 4, and 10. ¹⁴ Includes gassed in action. Army data include casualties in northern Russia to Aug. 25, 1919, and in Siberia to Apr. 1, 1920; Marine data represent casualties in Europe only. ¹⁵ Excludes personnel lost in sinking of the *Maine*, which occurred 2 months before hostilities.

¹⁶ Includes casualties incurred in October 1941, due to hostile action. ¹⁷ Covers only Army personnel base of 1,008,800.

¹⁸ Covers only Army personnel base of 246,410. ¹⁹ Covers only Army personnel base of 3,665,000.

²⁰ Covers all services base of 9,370,986. ²¹ Covers all services base of 4,428,939.

¹ Excludes transfers from appropriations to insurance trust funds from which the actual payments are made. Expenditures from VA Revolving Supply Fund also excluded to avoid duplication. Beginning 1958, total differs from supporting detail by the net of overpayments collected and written off as uncollectable under the readjustment benefits appropriation.

² Includes direct payments to beneficiaries from insurance appropriations, servicemen's indemnities, and benefits and dividends paid from insurance trust funds. Some noncash transactions, e.g., interest credited to dividends left on deposit also included.

³ Includes education and training allowances for veterans and servicemen, and educational assistance for wives, widows, sons, and daughters of deceased or totally disabled veterans.

⁴ Includes subsistence allowances, tuition, supplies, and equipment for training of disabled veterans.

⁵ Includes unemployment and self employment allowances: Statutory burial allowances; automobiles and other conveyances for disabled veterans; homes for paraplegics; payments to participants in yellow fever experiments; military and naval family allowances of World War I veterans; marine and seamen's insurance in World War I; adjusted compensation (World War I bonus); withdrawals of the personal funds of patients held by VA as banker and funds due incompetent beneficiaries; soldiers' and sailors' civil relief; vocational rehabilitation revolving fund, and other miscellaneous expenditures.

⁶ Estimated; includes expenditures for hospital and domiciliary care, outpatient medical and dental treatment, medical research, and grants to Republic of Philippines for medical care and treatment of veterans.

⁷ Comprises construction and related costs which include expenditures from funds allotted under NRA of 1933, PWA Act of 1938, grants to Republic of Philippines for construction and equipping of a hospital, and amounts transferred to Dept. of Army, Corps of Engineers, for construction of hospitals.

⁸ Includes expenses for vocational counseling, travel for certain programs, reporting allowances paid schools for certifying attendance of veteran trainees, private laws for relief, and all administrative salaries and expenses.

NO. 410. U.S. GOVERNMENT LIFE INSURANCE AND NATIONAL SERVICE LIFE INSURANCE POLICIES IN FORCE, BY PLAN: 1969

Money figures in millions of dollars. As of Dec. 31. Veterans Administration operates two insurance programs: (a) U.S. Government life insurance for veterans of World War I; and (b) national service life insurance for veterans of World War II and later. These two programs are separate in all particulars. See also *Historical Statistics, Colonial Times to 1967*, series Y 851-852.

¹ Administered as a trust fund for benefit of policyholders and their beneficiaries. All premiums collected on insurance issued and all interest earned thereon are paid into the fund; disbursements are made from it for death claims, dividends, and other benefits. The Government bears the cost of administration of this fund in addition to expenses for certain types of losses.

² Nonparticipating insurance for disabled veterans for whom good health provisions are waived because of disabilities resulting from active service between Oct. 8, 1940, and Sept. 2, 1945.

³ For veterans discharged on or after Apr. 26, 1961, with service-connected disability which would be compensable if 10 percent or more in degree, but who are otherwise insurable.

⁴ Veterans entitled to indemnity protection under Servicemen's Indemnity Act of 1951 and separated from active service without a service-connected disability between Apr. 6, 1951 and Jan. 1, 1957, were granted nonparticipating NSLI on 5-year renewable nonconvertible term plan without medical examination. Effective Jan. 1, 1959, this insurance made convertible to any one of 6 permanent plans (ordinary life, 20-payment life, 30-payment life, 20-year endowment, endowment at age 60, and endowment at age 65) or exchangeable for 5-year limited convertible term, which is not renewable after age 50.

⁵ In 1964, Congress enacted legislation which provided for a limited reopening of National Service Life Insurance for a period of 1 year beginning May 1, 1965 to veterans who qualify as stipulated in the law. Program is nonparticipating and self-supporting. ⁶ Modified life, a new form of NSLI, became available May 1, 1965.

FIG. XVII. SOCIAL WELFARE EXPENDITURES UNDER SELECTED PUBLIC PROGRAMS: 1940 TO 1969
[Fiscal-year data. See table 415]

Source: Chart prepared by Dept. of Commerce, Bureau of the Census. Data from Dept. of Health, Education, and Welfare, Social Security Administration.

Section 10

Social Insurance and Welfare Services

This section presents data related to governmental programs for old-age, survivors, disability, and health insurance (OASDHI); public and railroad employee retirement; unemployment and temporary disability insurance; aid to the needy; and maternal, child, and other welfare services. Also included here are selected data on workmen's compensation, pension plans and funds, the American Red Cross, United Fund campaigns, and philanthropic trusts and foundations.

There are several principal sources for these data. The monthly *Social Security Bulletin* and the bimonthly *Welfare in Review*, publications of the Department of Health, Education, and Welfare, present current data on many of the programs and summarize annual data in statistical supplements published each year. Current data on employment security activities are published monthly in the Department of Labor's *Unemployment Insurance Statistics* and *Employment Service Statistics*. Data on retirement and other benefits for railroad workers are published by the Railroad Retirement Board in its *RRB Quarterly* and *Annual Report*.

Social insurance under the Social Security Act.—Social insurance programs established by the Social Security Act provide protection against wage loss resulting from old age, prolonged disability, death, or unemployment and, since July 1966, protection against the cost of medical care in old age.

The old-age, survivors, disability, and health insurance (OASDHI) program provides monthly cash benefits to retired or disabled insured workers and their dependents and to the survivors of an insured worker. Within the specifications of the law, retirement benefits are payable to an aged insured worker; to his aged spouse or his spouse at any age caring for his child who is under age 18 or totally disabled; and to his child who is under age 18, totally disabled, or a full-time student, age 18 to 21. An aged worker becomes eligible for full benefits at age 65, although he may elect reduced benefits up to 3 years earlier; his spouse is under the same limitations. Special benefits are also provided the aged 72 and over who do not meet the insured status requirements. Under certain conditions, survivor benefits are payable to some dependents of an insured worker, including his aged or disabled widow or his widow at any age caring for his child who is under age 18 or totally disabled; his child who is under age 18, totally disabled, or a full-time student, age 18 to 21; and aged parents. Disability benefits are payable to an insured worker under age 65 with a prolonged disability that meets the definition in the Act and to his dependents on the same basis as dependents of retired workers. A lump sum benefit is also payable on the death of an insured worker.

Beginning July 1966, health insurance has been provided under two coordinated plans for nearly all people age 65 and over: A hospital insurance plan which covers hospital and related services and a voluntary supplementary medical insurance plan which covers physicians' services and related medical services.

Retirement, survivors, disability, and hospital insurance benefits are paid for by the contributions of workers, employers, and the self-employed on earnings up to \$7,800. Currently workers and their employers each pay 4.2 percent, and the self-employed pay 6.3 percent of covered wages for retirement, survivors, and disability insurance. The special benefits for noninsured persons age 72 and over are financed from general funds. For hospital insurance, workers, employers, and the self-employed each pay 0.6 percent (see table 436). The rates are scheduled to increase gradually. For persons 65 and over currently not insured under social security the hospital benefits

will be financed out of Federal general revenues. The voluntary medical insurance plan is financed by a \$5.30 a month (effective July 1, 1970) premium paid by persons age 65 and over who choose to enroll in the plan, and by an equal contribution by the Federal Government from general revenues. The money collected is deposited in Federal trust funds.

Both unemployment insurance and the public employment (placement) service are administered through the Manpower Administration of the Department of Labor and each State's employment security agency. Under agreements with the Secretary of Labor, the State agencies also administer unemployment compensation for eligible ex-servicemen and Federal employees, and direct aid in the form of training and related cash allowances to persons being trained under the Manpower Development and Training Act and the Trade Expansion Act.

State unemployment insurance laws pay benefits to unemployed covered workers meeting the qualifications in the State law. In most States, a waiting period of 1 week must be served before payments begin. Benefits are payable for a maximum number of weeks, ranging from 26 to 39 weeks among the States (most frequently 26 weeks); maximum weekly benefits without dependents' allowances range from \$38 to \$79. Ten States and the District of Columbia augment their allowances for dependents. Maximum augmented weekly benefits range from \$52 to \$114. Massachusetts pays \$6 for each dependent up to one-half the weekly benefit amount. In Puerto Rico, benefits are payable for a maximum of 15 weeks; the maximum weekly benefit is \$45 for nonagricultural workers and \$35 for agricultural workers.

A 3.1-percent Federal tax is levied on the payroll of employers of 4 or more workers in industries covered by the Act and is used to finance the Federal-State program. Employers subject to the Federal law are allowed a credit of 2.7 percent of taxable payrolls for contributions paid to State agencies under State unemployment insurance laws; the Federal Government retains 0.4 percent of the tax out of which the Congress appropriates funds each year to cover employment security administrative costs.

Excluded from coverage are the railroad industry (see below) and most workers in domestic service and nonprofit organizations. A limited number of agricultural and State and local government workers are covered.

The standard rate of contributions payable by employers in all but 9 States is 2.7 percent of the taxable payroll. However, employers with favorable unemployment experience may be assigned a lower rate (except in Puerto Rico); in 1969 the average contribution rate under State laws was estimated at 1.4 percent of the taxable payroll. In most States, the contribution is based on the first \$3,000 paid to a worker during the year. In 22 States, the rate applies to wages ranging from \$3,300 to \$7,200. Contributions are deposited to State accounts in the Federal Unemployment Trust Fund, from which States withdraw amounts needed for benefit payments.

Social insurance for railroad workers.—The social insurance programs administered by the Railroad Retirement Board cover employees of railroads or companies and organizations affiliated with railroad transportation. The Railroad Retirement Act provides retirement annuities for aged and disabled workers and for wives of retired employees, and benefits to survivors of deceased workers. Supplemental annuities are also provided for certain retired employees under a 5-year plan established in November 1966. Also, Federal health insurance protection is available to railroad workers on the same basis as workers covered by social security. Funds for the regular railroad retirement and survivor benefit program come primarily from a tax, divided equally between employer and employee, on the first \$650 of each month's earnings. The combined rate for 1970 is 19.1 percent, including 1.2 percent for hospital insurance benefits. The supplemental annuity program is financed by a special tax on railroad employers of 2 cents for each hour for which compensation is paid.

The Railroad Unemployment Insurance Act provides benefits for unemployment and sickness financed by contributions from covered employers of 4 percent (applicable to earnings not in excess of \$400 a month).

Social insurance for Federal Government employees.—One contributory retirement system for Federal civilian employees and two small noncontributory systems for special classes of employees are administered by the Civil Service Commission. In addition, there are separate retirement systems in operation for the uniformed services (supplementing OASDHI under which they are covered on a contributory basis) and for special classes of Federal employees.

The Civil Service Retirement Act provides for age, optional, disability, deferred retirement, and discontinued service annuities for employees in the executive, judicial, and legislative branches of the U.S. Government and in the District of Columbia government if not subject to another retirement system or excluded by statute or by administrative order. It also provides annuities for the widows and minor children of deceased employees, and under certain conditions to the survivors of deceased annuitants. The employee contribution rate is 7.0 percent (as of January 1970), computed on base pay. Employing agencies pay amounts equal to employee contributions.

Workmen's compensation.—All States have programs providing protection against work-connected injuries and deaths. Federal workmen's compensation laws cover Federal Government employees, private employees in the District of Columbia, and longshoremen and harbor workers. Most State workmen's compensation laws exempt such employments as agriculture, domestic service, and casual labor; about half exempt employers who have fewer than a specified number of employees. Occupational diseases, or at least specified diseases, are compensable under most laws.

In most States total payments to injured workers or to survivor families are limited as to time, amount, or both. All compensation acts require that medical aid be furnished to injured employees; in almost one-fourth of the laws there are either duration or cost limitations—or both—on the amount of medical benefits provided.

Public assistance.—Six programs, all administered by the States and localities, provide public assistance. Payments to four groups—the aged, the blind, the permanently and totally disabled, and children whose need arises from certain causes—are financed in part from Federal funds granted to States under the Social Security Act. The States may also receive grants for medical assistance to persons not able to take care of their medical bills themselves. The Social and Rehabilitation Service handles the Federal aspects of these programs. Aid to other needy persons is furnished mainly through general assistance, toward which the Federal Government makes no contribution.

To receive a Federal grant for assistance payments and administrative expenses under any Social Security Act program, a State must have a plan approved as meeting the requirements of the Act. Each State establishes the conditions under which needy people may receive assistance and determines how much they shall receive.

Health and welfare services.—Programs providing health and welfare services are aided through Federal grants to States for maternal and child health services, services for crippled children, maternity and infant care projects, projects for comprehensive health services for children of pre-school and school age, child welfare services, vocational rehabilitation, and public health services (including hospital survey and construction, community health centers, and control of specific diseases). The Children's Bureau, a part of the Social and Rehabilitation Service, administers the first five of these programs; the others are administered by the Rehabilitation Services Administration and the Public Health Service.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1967*. See preface.

No. 415. SOCIAL WELFARE EXPENDITURES UNDER PUBLIC PROGRAMS: 1935 TO 1969

[In millions of dollars, except percent. For Federal Government, most States, and some localities, years ending June 30. Represents expenditures under public law and from trust accounts. Includes administrative expenditures and capital outlay; also includes some expenditures and payments outside U.S. See table 416 for program detail. See *Historical Statistics, Colonial Times to 1957*, series H 1-45, for related but not comparable data.]

- Represents zero. X Not applicable.

¹ Excludes refunds to those leaving service. Federal data include military retirement.

² Includes compensation for Federal employees and ex-servicemen, and trade adjustment and cash training allowances.

³ Programs operate in 4 States only: Calif., N.J., N.Y., and R.I. ⁴ Benefits by private insurance carriers, State funds, and self-insurers. ⁵ Work relief, other emergency aid, surplus food for the needy, food stamps, and Job Corps, Neighborhood Youth Corps, and Work-Experience programs under the Economic Opportunity Act.

⁶ Excludes domiciliary care in institutions other than mental or tuberculosis, and services included with other programs in social welfare series. ⁷ Includes cost of medical care for military dependent families.

⁸ Includes services for crippled children. ⁹ Excludes water supply and sanitation services.

¹⁰ Includes burial awards. ¹¹ Excludes servicemen's group life insurance. ¹² Federal expenditures for administrative costs (Office of Education) and research not shown separately but included in total.

¹³ Construction costs of vocational and adult education programs included under elementary-secondary expenditures.

¹⁴ Represents primarily surplus food for nonprofit institutions. ¹⁵ Represents primarily child welfare services under title V of the Social Security Act. ¹⁶ Includes community action, migrant workers, and VISTA programs and all administrative expenses of the Office of Economic Opportunity.

¹⁷ Includes administrative expenses of the Secretary of Health, Education, and Welfare; Indian welfare; aging activities; certain manpower activities; and other items.

X Not applicable.

¹ Includes railroad employees and all persons covered by Federal law except those on a group-elective or individual voluntary basis for whom coverage has not been arranged.

² Estimates based on number expected to report earnings at end of year.

³ Beginning 1951, some persons in these groups became eligible for coverage; others were still not eligible, such as Federal civilian employees, certain State and local government employees, and persons whose coverage depends on having minimum earnings.

⁴ Farm workers, self-employed farmers, State and local government employees, employees of nonprofit organizations, and some additional small groups.

⁵ Persons whose coverage was authorized but not arranged on a group-elective or individual voluntary basis, such as employees of State and local governments and self-employed farmers who were eligible to report a percentage of gross earnings rather than net earnings.

- Represents zero. Z Less than 0.5 percent. ¹ Children aged 18 and over of retired, deceased, or disabled insured workers who are in receipt of disability benefits under the old-age, survivors, disability, and health insurance program as the result of disabilities that began before age 18.

² Persons under age 65 who are in receipt of disability benefits under the OASDHI program because of their inability generally to engage in any substantial gainful activity.

³ Severely disabled persons who are not in receipt of any type of monthly cash benefit under OASDHI. "Severely disabled" is defined as unable to work altogether or unable to work regularly because of a chronic health condition or impairment lasting 7 or more months. ⁴ For definition of median, see preface.

¹ Net cash and medical benefits paid under standard workmen's compensation policies.² Net cash and medical benefits paid by competitive and exclusive State funds and by Federal workmen's compensation system.³ Cash and medical benefits paid by self-insurers, plus value of medical benefits paid by employers carrying workmen's compensation policies that exclude standard medical coverage.⁴ Premiums written by private carriers and State funds and benefits paid by self-insurers increased by 5-10 percent to allow for administrative costs. Also includes benefits paid and administrative costs of Federal workmen's compensation system.Source: Dept. of Health, Education, and Welfare, Social Security Administration; *Annual Statistical Supplement to the Social Security Bulletin and Social Security Bulletin*, January 1970.

No. 448. WORKMEN'S COMPENSATION PAYMENTS, BY STATES: 1940 TO 1968

[In thousands of dollars. Payments represent cash and medical benefits and include insurance losses paid by private insurance carriers (compiled from the *Spectator (Insurance by States . . . of Casualty Lines)*, from reports of State Insurance commissions, and from A. M. Best Co.); net disbursements of State funds (from the *Spectator*, from *Argus Casualty and Surety Chart*, and from State reports), estimated for some States; and self-insurance payments, estimated from available State data. Calendar-year data, except fiscal-year data for Federal employees and for a few States with State funds. Includes benefit payments under Longshoremen's and Harbor Workers' Compensation Act and Defense Base Compensation Act for States in which such payments are made]

No. 449. PUBLIC ASSISTANCE—PAYMENTS AND RECIPIENTS: 1950 TO 1969

[Beginning October 1950, includes Puerto Rico and Virgin Islands, and beginning 1960, Guam. Number of recipients and average monthly payments exclude vendor payments for medical care (i.e., payments made directly to suppliers of medical care) and cases receiving only such payments. Total payments for year include vendor payments for medical care. See also *Historical Statistics, Colonial Times to 1967*, series H 186-198, for related data]

NA Not available. X Not applicable.

¹ Includes the children and 1 or both parents, or 1 caretaker other than a parent, in families where the needs of such adults were considered in determining the amount of assistance.

² Includes 3,600 recipients of payments made without Federal participation in California and 470 in Missouri;

excludes an estimated 7,800 such recipients in Pennsylvania.

³ Partly estimated; total not as large as sum of State figures because of adjustment.

⁴ Estimated.

No. 464. FOUNDATIONS—NUMBER AND FINANCES, STATES

[Money figures in thousands of dollars. Figures are for latest year reported by foundations, usually 1964 or 1965. A foundation may be defined as a nongovernmental, nonprofit organization having a principal fund of its own, managed by its own trustees or directors, and established to maintain or aid social, educational, charitable, religious, or other activities serving the common welfare. Excludes organizations which make general appeals to the public for funds, act as trade associations for industrial or other special groups, are restricted by charter solely to aiding one or several named institutions, or which are captive trusts, within colleges, churches, or other organizations, or are very small—defined as having neither assets of \$200,000 nor making grants of at least \$10,000 in the latest year of record. See table 465]

Section 11

Income, Expenditures, and Wealth

This section presents statistics on two different aspects of income and expenditures: One aspect relates to the national income and product system (a summation reflecting the entire complex of the Nation's economic activities and the interaction of its major components) and the other to the distribution of income to families and individuals. Statistics on national wealth are also included in this section. Figures from the flow-of-funds accounts, a financial view of the economy, appear in section 16.

The primary source for national income and product information is *Survey of Current Business*, published monthly by the Department of Commerce, Office of Business Economics. The complete set of national income and product tables for the 1965-68 period is published in the July 1969 *Survey*. Corresponding information for earlier years, with data starting in 1929 in most cases, is published in *The National Income and Product Accounts of the United States, 1929-1965, Statistical Tables*, a supplement to the *Survey*. Summary estimates for current periods appear in the most recent issue of the *Survey*. The basic reference sources for concepts and methodology are *National Income, 1954 Edition, U.S. Income and Output, 1958*, and the August 1965 issue of the *Survey*.

The major source of data on income distribution is the Bureau of the Census (Census of Population and Current Population Survey). Annual data on income distribution by size-class appear in *Current Population Reports—Consumer Income*, Series P-60. A brief description of the Current Population Survey, which is the basis for the data in that report, is given on page 1 of this edition of the *Statistical Abstract*.

Another primary source of information on income distribution is the national Survey of Consumer Finances conducted annually since 1946 by the Survey Research Center of The University of Michigan. From 1946 through 1960, this survey comprised a sample of approximately 2,700 family units or 3,000 spending units located in 66 sampling areas; from 1961 to 1963, it comprised approximately 1,850 family units or 2,000 spending units. In 1964 and 1965, it comprised 1,300-1,600 family units; in 1966 to 1968, 2,400-2,700. The results of these surveys are published in a monograph series, *Survey of Consumer Finances*.

National income and product.—A general view of the economy is provided by a summary of the Nation's income, expenditure, and saving, shown in the form of a balancing set of accounts for the major economic categories—persons, business, international, and government. (See table 473.) An explanation of the items included in this summation may be found in the 1967 *Historical and Descriptive Supplement to Economic Indicators*, 90th Congress, 1st Session.

Gross national product.—Gross national product (GNP) is the total national output of goods and services valued at market prices. It can be viewed in terms of expenditure categories. These categories comprise purchases of goods and services by consumers and government, gross private domestic investment, and net exports of goods and services. The goods and services included in GNP are largely those bought for final use (excluding illegal transactions) in the market economy. There are a number of inclusions, however, which represent imputed values, the most important of which is the rental value of owner-occupied dwellings. GNP measures the output attributable to the factors of production—labor and property—supplied by residents of the United States. GNP differs from "national income," described below, mainly in that GNP includes allowances for depreciation and for indirect taxes (such as sales and excise taxes).

National income.—National income is the aggregate earnings of labor and property which arise in the current production of goods and services by the Nation's economy. It is the sum of compensation of employees, proprietors' income, rental income, net interest, and corporate profits. Thus, it measures the total factor costs of the goods and services produced by the economy. Earnings are inclusive of direct taxes on those earnings.

Personal income.—Personal income is the current income received by persons from all sources net of contributions for social insurance. Not only individuals (including owners of unincorporated enterprises), but nonprofit institutions, private trust funds, and private health and welfare funds are classed as "persons." Personal income includes transfers (payments not resulting from current production) from government and business such as social-security benefits, military pensions, etc., but excludes transfers among persons. Although most of the income is in monetary form, there are important nonmonetary inclusions—chiefly, estimated net rental value to owner-occupants of their homes, the value of services furnished without payment by financial intermediaries, and the value of food consumed on farms.

Disposable personal income is the income remaining to persons after deducting personal tax and nontax payments to general government. It is the income of persons available for spending or saving.

Distribution of income by size-class.—Money income statistics are based on data collected in various field surveys of income conducted since 1936. In each of these field surveys trained enumerators interview representative samples of the population with respect to income received during the previous year. The income here referred to is consumer money income for the calendar year and is before deduction of income taxes or social-security taxes unless otherwise specified in individual tables. Non-money items of income are not covered. None of the aggregate income concepts (gross national product, national income, or personal income) is exactly comparable with consumer money income. The nearest approximation is "personal income."

Individuals' saving and assets.—The Securities and Exchange Commission issues detailed estimates of individuals' saving showing the increase in financial assets, net investment in tangible assets, less increase in debt of individuals. A series starting with 1946 is published in a special release and in the Commission's *Statistical Bulletin*. (See table 484.) A reconciliation of the SEC estimates with the Department of Commerce estimates of personal saving appears with the annual publication of SEC individuals' saving in the 4th quarter release, *Volume and Composition of Individuals' Saving*, and in the *Statistical Bulletin*.

The Survey Research Center of The University of Michigan also collects annual data on assets, usually including the distribution of liquid assets, and occasional data covering positive, negative, and net savings of families, by income groups.

National wealth.—The national wealth data shown here (tables 511 to 515) are drawn from a series of articles published in the January 1967 issue of *Finance* magazine. They are, in large part, based on data from R. W. Goldsmith, *A Study of Saving in the United States* and *The National Wealth of the United States in the Post-war Period*. As is the case in all national wealth estimates, the figures are intended chiefly to indicate the order of magnitudes involved and to permit rough comparisons among types of wealth and of the growth of wealth over long periods. Definitions and analytical details are presented in the source publication.

Current and constant dollars.—Several of the series in this section are expressed both in current dollars and in constant dollars. Data shown in current dollars are unadjusted for comparability over a period of time; that is, the dollars shown are in terms of the level of prices prevailing for each of the years specified. Data shown in constant dollars are computed values which eliminate the effect of price changes. Constant dollars are derived by dividing current-dollar figures by their corresponding price indexes based on a year specified as 100.

Implicit price deflator.—The implicit price deflator is the ratio of GNP in current prices to GNP in constant prices. It is a weighted average of the price indexes used to deflate the components of GNP, the implicit weights being expenditures in the current period.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

No. 470. GROSS NATIONAL PRODUCT—SUMMARY: 1929 to 1969

No. 481. NATIONAL INCOME, BY INDUSTRIAL ORIGIN: 1950 TO 1969

[In billions of dollars. Prior to 1960, excludes Alaska and Hawaii. National income (for definition, see text, p. 310) originating in each industry is the sum of factor costs incurred by the industry in production. Hence, it is net value added to production by industry, measured at factor costs. See also *Historical Statistics, Colonial Times to 1967*, series F 22-33]

² Net income of farm proprietors, farm wages and farm "other" labor income, less personal contributions under the old-age, survivors, disability, and health insurance program.

⁴ Income disbursed directly to persons by Federal, State, and local governments. Comprises wages and salaries (net of employee contributions for social insurance), other labor income, interest, and transfer payments.

Source: Dept. of Commerce, Office of Business Economics; *Survey of Current Business*, August 1969.

No. 483. PERSONAL INCOME, 1950 TO 1969, AND RANK ORDER, 1969, BY STATES

[Represents a measure of current income received from all sources during the calendar year by the residents of each State; hence, totals differ from those in tables 472, 478, and 480. See text, p. 310]

No. 498. AVERAGE POVERTY LEVELS BY SIZE OF FAMILY, SEX OF HEAD, AND RESIDENCE: 1968

[In dollars. Poverty levels as defined by the Social Security Administration in 1964 reflected the differing consumption requirements of families based on their size and composition, age of members, and farm-nonfarm residence. The calculations centered around the Department of Agriculture's Economy Food Plan (see table 123). For families of 3 or more persons, the poverty level was set at 3 times the cost of the Economy plan. Under a modified definition, adopted in 1969, the SSA poverty levels for nonfarm families were retained for the base year 1963 but were adjusted annually based on changes in the Consumer Price Index rather than in the cost of economy food items, and farm poverty levels were raised from 70 to 85 percent of corresponding nonfarm levels. For further details, see source]

NUMBER OF FAMILY MEMBERS	Total	NONFARM			FARM		
		Total	Male head	Female head	Total	Male head	Female head
1 member.....	1,742	1,748	1,827	1,700	1,487	1,523	1,441

No. 501. POOR HOUSEHOLDS—POVERTY GAP: 1959, 1963, AND 1968

[Families, unrelated individuals, and presence of children as of March of year following year shown. Poverty gap defined as the difference between the total income of families and unrelated individuals below the poverty level and their respective poverty levels. In computing the income deficit, families reporting a net income loss are assigned zero dollars; for such cases the poverty gap is equal to the poverty level]

FIG. XX. WHOLESALE AND CONSUMER PRICE INDEXES: 1955 TO 1969
[1957-59=100. Wholesale prices in primary markets. See tables 517, 519, and 523]

Source: Chart prepared by Dept. of Commerce, Bureau of the Census. Data from Dept. of Labor, Bureau of Labor Statistics.

Section 12

Prices

This section presents indexes of wholesale, retail, and consumer prices, as well as prices for selected commodities. The primary sources of these data are publications of the Department of Labor, Bureau of Labor Statistics, which include: *Monthly Labor Review*; *Consumer Price Index* (monthly); *Estimated Retail Food Prices by Cities* (monthly); *Retail Prices and Indexes of Fuels and Electricity* (monthly); and *Wholesale Prices and Price Indexes* (monthly). The Statistical Reporting Service of the Department of Agriculture prepares indexes of prices received and prices paid by farmers.

The Bureau of Labor Statistics prepares monthly indexes of wholesale prices; a weekly index of spot market prices of 22 commodities; and indexes of consumer prices for urban wage earners and clerical workers for the average of U.S. cities and individually for selected large cities, as well as component indexes for food and other groups.

Wholesale price index.—This index, dating from 1890, is the oldest continuous statistical series published by the Bureau of Labor Statistics. It is designed to measure average changes in prices of commodities sold in primary markets in the United States.

The index has undergone several revisions (see *Monthly Labor Review*, February 1962). It is now based on approximately 2,400 commodity price series instead of the approximately 1,900 included in the 1947–60 period and the 900 included for the period prior to 1947. Prices used in constructing the index are collected directly from sellers, if possible, and generally apply to the first significant large-volume commercial transaction for each commodity—i.e., the manufacturer's or other producer's selling price, the importer's selling price, or the selling price on an organized exchange or at a central market.

The weights used in the index represent the total net selling value of commodities produced or processed in this country, or imported. The values are f.o.b. production point and are exclusive of excise taxes, interplant transfers, military products, and goods sold directly at retail from producing establishments. Effective January 1967, the weights are values of net shipments of commodities as derived from the industrial censuses of 1963 and other data.

Consumer price index.—This index as presently constructed measures the average change in prices of goods and services purchased by urban wage earner and clerical families and single persons living alone. Prior to the most recent revision, completed in December 1963, the coverage of the index was restricted to families of two or more persons. The weights used in calculating the index are based on studies of actual expenditures by wage earners and clerical workers. The quantities and qualities of the items in the "market basket" remain the same between consecutive pricing periods, so that the index measures the effect of *price change only* on the cost of living of these families. The index does not measure changes in the total amount families spend for living; city indexes do not measure relative differences in prices or living costs between cities.

A study conducted during 1917–19 provided the weights used for 1913 to 1935. Since then, this index has undergone four major revisions, which involved bringing the "market basket" of goods and services up to date, revising the weights, and improving the sample and methodology. From 1935 through 1949, time-to-time changes in retail prices were weighted by 1934–36 average expenditures except for certain temporary wartime adjustments. Weights used for 1950 through 1952 represented estimated 1947–49

spending patterns. Beginning 1953, the weights represented average purchases of urban wage-earner and clerical-worker families in 1950. The most recent revision, incorporated in a new series beginning in 1964, introduced expenditure weights relating to 1960-61. The description which follows and the tables in this section refer to the new series.

The list of items currently priced for the index includes approximately 400 goods and services. For some items, several different qualities are priced. The items priced are described by detailed specifications to insure that, as far as possible, the same quality is priced each time, and that differences in reported prices are measures of price change only. Sales taxes are reflected wherever applicable.

The national index is based on prices collected in 56 areas. These include the urban portions of 37 standard metropolitan statistical areas (SMSA), the more extensive standard consolidated areas for Chicago and New York-Northeastern New Jersey; and 17 nonmetropolitan urban places. Area definitions are those established for the 1960 census and do not include any subsequent revisions. Foods, fuels, and a few other items are priced monthly in all areas. Prices of most other goods and services are obtained monthly in the 5 largest areas and every 3 months in other areas. Rents are surveyed bimonthly in the 5 largest areas and every 3 months in other areas. Estimates are made for unpriced areas each month. Price changes for the 56 areas are combined for the United States with weights based on 1960 population of the several areas represented by each sample area. Separate indexes are compiled for 23 of the 56 areas.

Retail food price index.—Retail food price indexes are computed as a subgroup of the consumer price index. Weights used at various times are consistent with those for the index as a whole. The indexes were computed from prices of 54 foods for January 1935 to March 1943, 61 foods for March 1943 to June 1947, 50 foods for June 1947 to January 1950, 60 foods for January 1950 to December 1952, 90 foods from January 1953 to December 1963, and 96 foods beginning January 1964.

¹ NA Not available. ² Beginning 1965, No. 1 hard winter wheat.³ Grade description changed from good to choice in 1951 with no change in quality.⁴ 1960 price for 10 spot market, 15/16" middling; 1955, for 14 spot market, 15/16" middling; 1" thereafter. Beginning September 1962, price is for 15 market average. Beginning July 1968, price is for 1 1/4" middling for 12 spot market averages.⁵ Break in price series caused by change in reporter sample.⁶ 1960 and earlier years, eggs, extras, New York.⁷ 10-month average.⁸ 1950 price for bulk lots, Savannah; 1955, tank cars, New York.⁹ 1950-1955 prices for 5/16" thickness; 3/4" thereafter.¹⁰ 1950-1955 prices, broker to consumer, Pittsburgh basing point; thereafter, consumers' buying price, including brokerage, delivered, Pittsburgh district.¹¹ 1950 price, standard, heavier than 60 lb., No. 1 open hearth, f.o.b., mill; thereafter, standard, carbon steel, No. 1 open hearth, 115 lb. per linear yard, control cooled, base quantity, f.o.b. mill.¹² 1955 price for nails, wire, 8d common, carload lots; 1957 through August 1960, packed in fiberboard boxes; September 1960, lots of 30,000 lb.; for 1960, 1955, and 1960, price is for units of 100.Source: Dept. of Labor, Bureau of Labor Statistics; annual report, *Wholesale Prices and Price Indexes*.

Export and Import Prices

343

NO. 522. AVERAGE PRICES (UNIT VALUES)—SELECTED ARTICLES EXPORTED AND IMPORTED: 1950 TO 1969

[In dollars per unit. Includes trade of Puerto Rico with foreign countries. Values of goods imported represent market values in foreign country from which imported. Unit values obtained by dividing annual values of imports or domestic exports by annual quantities. Values of goods exported represent values at point of exportation. Unit values may show actual price movements only roughly for commodities subject to considerable price variations among different grades, methods of packing, etc., and to year-to-year variations in proportions of grades, etc. Unit values of agricultural exports also include effects of CCC sales for exports, at prices well below U.S. market quotations, and of other Government programs]

No. 523. CONSUMER PRICE INDEXES, BY COMMODITY GROUPS: 1920 TO 1969

[1957-59=100. Prior to 1964, excludes Alaska and Hawaii. Beginning 1964, index structure revised to reflect buying patterns of urban wage earners and clerical workers in the 1960's, including single workers living alone as well as families of two or more persons; indexes for prior years apply only to families of two persons or more. See *Historical Statistics, Colonial Times to 1957*, series E 113-139, for indexes on 1947-49 base]

¹ For definition of metropolitan areas, see text, p. 2. ² Places with 2,500-50,000 population.

³ All families in this category are assumed to be renters.

⁴ Includes \$110 for lodging away from home city in metropolitan areas, and \$40 in nonmetropolitan areas.

⁵ Average contract rent plus cost of required amounts of heating fuel, gas, electricity, water, specified equipment, and insurance on household contents.

⁶ Interest and principal payments plus taxes; insurance on house and contents; water, refuse disposal, heating fuel, gas, electricity, and specified equipment; and home repair and maintenance costs.

⁷ All families were assumed to be automobile owners. ⁸ Includes gifts and contributions and life insurance.

⁹ Represents the weighted average costs of renter and homeowner families. Total budget costs include an allowance for gifts and contributions not shown separately. ¹⁰ Includes \$53 for lodging away from home city.

NO. 529. RETAIL PRICE INDEXES OF FOOD—SELECTED AREAS FOR URBAN WAGE EARNERS AND CLERICAL WORKERS: 1950 to 1969

[1957-59=100. See text, p. 338, and headnote, table 523. Through 1960, indexes applied only to families of 2 persons or more in urbanized area. Beginning 1965, area indexes represent entire urban portion of standard metropolitan statistical area, except that standard consolidated area is used for Chicago and New York; see text, p. 2. See *Historical Statistics, Colonial Times to 1957*, series E 114-120, for indexes on a 1947-49 base]

¹ Based on 56 cities for 1950, 46 cities for 1955 and 1960, an average of 50 urban areas for 1965, and 56 areas beginning 1968. City indexes not compiled for medium- and small-sized cities included in the national average. 1960 and earlier years exclude Alaska and Hawaii.

² "Food at home" only.

³ Excludes Portland, Oreg. and Scranton, Pa.; 1965 also excludes: Cincinnati, Ohio-Ky.; Houston, Tex.; Kansas City, Mo.-Kans.; Milwaukee, Wis.; Minneapolis-St. Paul, Minn.; and San Diego, Calif.

No. 530. AVERAGE RETAIL PRICES OF SELECTED FOODS: 1950 TO 1970

[In cents per pound, except as indicated. Prior to 1965, excludes Alaska and Hawaii, and represents averages of prices reported by retail dealers in cities included in the Retail Food Index. Beginning 1965, data are estimated averages of prices reported by retail dealers. Number of cities varies according to the number of cities in which an item was priced and the availability of prices within the cities. Excludes sales taxes. Prices for individual cities combined on basis of population weights. See also *Historical Statistics, Colonial Times to 1957*, series E 161-176]

FIG. XXI. POPULAR VOTE CAST FOR PRESIDENT, BY MAJOR PARTY: 1928 TO 1968

[See table 535]

Section 13

Elections

This section relates primarily to presidential, congressional, and gubernatorial elections. Also presented are summary tables on Congressional legislation, population of voting age, voter participation, and campaign expenditures.

Official statistics on Federal elections are collected by the Clerk of the House of Representatives and published biennially in *Statistics of the Presidential and Congressional Election* and *Statistics of the Congressional Election*. Congressional Quarterly Inc., Washington, D.C., publishes a special report, *Complete Returns of the 19— Elections by Congressional District*, in March or April of each odd-numbered year, presenting the results of presidential, congressional, and gubernatorial elections. Details of both Federal and State election statistics appear also in *America Votes*, issued biennially by the Governmental Affairs Institute. Data on Federal elections also appear in the *Congressional Directory*, United States Congress, and in official State documents.

Almost all Federal, State, and local governmental units in the United States conduct elections at various intervals—annual, biennial, quadrennial, or longer—for different types of offices and other purposes. No regular and complete system exists for reporting either the number of elections held or the numbers of votes cast for candidates, except for Federal offices and, in most States, for State offices. The conduct of elections is regulated by State laws or, in some cities and counties, by local charter. An exception is that the United States Constitution prescribes the basis of representation in Congress and the manner of electing the President of the United States, and grants to Congress the right to regulate the times, places, and manner of electing Federal officers. The 24th Amendment to the Constitution, adopted in 1964, gave citizens the right to vote in any election for Federal office without payment of tax.

Presidential election.—The election of the President is provided for in the Constitution, article II, section 1, through establishment of an electoral college in each State, for each presidential election. The method of casting the electoral vote was modified in 1804 by the adoption of the 12th Amendment to the Constitution. The number of electors, and therefore of electoral votes, is "equal to the whole number of Senators and Representatives to which the State may be entitled in Congress." The electors are elected by popular vote in all States. The 22d Amendment to the Constitution, adopted in 1951, limits presidential tenure to 2 elective terms of 4 years each, or to 1 elective term for any person who, upon succession to the Presidency, has held the office or acted as President for more than 2 years. The 23d Amendment, adopted in 1961, grants the District of Columbia electors for President and Vice President.

Congressional election.—The number of members in the House of Representatives is fixed by the Congress at the time of each apportionment; since 1912, it has remained constant at 435. However, the legislation granting statehood to Alaska and Hawaii allotted 1 Representative to each of those States and, during 1960 to 1962, increased the total of members to 437. The total reverted to 435 after reapportionment following the 1960 Census. The Constitution provides that "Representatives shall be apportioned among the several States according to their respective numbers . . ." The Constitution also requires that each State have at least 1 Representative. Members are elected for 2-year terms, all terms covering the same period.

The Senate is composed of 100 members, 2 from each State, who are elected to serve for a term of 6 years. One-third of the Senate is elected every 2 years. Senators were originally chosen by the State legislatures. The 17th Amendment to the Constitution, adopted in 1913, prescribed that Senators be elected by popular vote.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

No. 535. VOTE CAST FOR PRESIDENT, 1900 TO 1968, AND FOR REPRESENTATIVES, 1930 TO 1968, BY POLITICAL PARTIES

[Prior to 1958, excludes Alaska and Hawaii. Includes vote cast for major party candidates endorsed by minor parties. See also *Historical Statistics, Colonial Times to 1957*, series Y 27-31 and Y 146-149]

- Represents zero.

¹ Includes votes for minor party candidates, independents, unpledged electors, and scattered write-in votes.

² Includes District of Columbia.

³ Mainly Progressive in 1912 and 1924, States Rights and Progressive in 1948, and American Independent in 1968.

⁴ Socialist Labor only.

⁵ Includes 4,831,000 votes cast for La Follette, candidate for the Progressive Party.

⁶ Workers Party. ⁷ Includes 9,906,000 votes cast for George Wallace, American Independent Party.

⁸ See also table 549.

⁹ Includes minor party votes. ¹⁰ Includes Hawaii figures for July 1959.

No. 549. VOTE CAST FOR UNITED STATES REPRESENTATIVES, BY MAJOR POLITICAL PARTIES, BY STATES: 1964, 1966, AND 1968

In thousands, except percent. In each State, totals represent the sum of votes cast in each Congressional District, except as follows: In Alaska, Delaware, Nevada, Vermont, and Wyoming, only 1 Representative is elected from the State at large. In Hawaii, New Mexico, and North Dakota, 2 Representatives are elected from the State at large. In Maryland, Ohio, and Texas, in 1964 Representatives were elected by district, except 1 was elected at large; these at-large votes are not reflected in this tabulation. In numerous States, one or other of the major parties had no candidate in some districts. In those cases where votes of a party as such are cast in endorsement of a candidate of another party, votes are counted as for the endorsing party. See also footnotes below.

¹ Includes vote cast for minor parties.

² 1964 for 3d District only; 1966 data for 3d and 4th Districts. Arkansas law does not require tabulation of votes for unopposed candidates.

³ A person may be candidate of one or more parties for same office, so party votes for candidates are not segregable. Party vote shown is computed by assigning to a party total votes for candidates who are members of that party. ⁴ Voters entitled to vote for any 2 candidates; total ascertained by adding the highest vote received by a single candidate in each political party.

⁵ 2 at-large positions filled separately. Voters have 1 vote for each position. State totals represent largest number of votes cast for either position. Therefore, total shown for each party does not necessarily add to overall State total.

⁶ Includes votes cast by minor parties for Democratic-endorsed and Republican-endorsed candidates.

⁷ Actual figures, Republican 124,453; Democratic 123,959. ⁸ Vote for the 6th District not available.

NO. 552. COMPOSITION OF STATE LEGISLATURES, BY POLITICAL PARTY AFFILIATIONS: 1964, 1966, AND 1968

[Dates shown refer to election years in most States, to odd-year elections a year previously in a few; figures reflect immediate results of elections, including holdover members in partial renewal situations. Dem. = Democratic; Rep. = Republican. In general, Lower House refers to body consisting of State Representatives; Upper House, of State Senators. In some States, legislature membership has been changed in recent years; data do not reflect special elections held in 1965 as a result of legislative reapportionment]

- Represents zero.

¹ Data exclude 4 Independents for Vermont and 1 Independent for Massachusetts. For New Hampshire, 1 seat divided with a half-vote assigned to each of 2 members.

² For Georgia, Nevada, and South Dakota, data exclude 1 Independent each; and Rhode Island, 1 Republican Independent.

³ Upper House members serve 4-year terms, some elected every 2 years.

⁴ One Independent elected.

⁵ Legislators elected without party designation (135 in lower house and 67 in upper house).

⁶ Single chamber (unicameral body) of 49 members, elected without party designation.

Section 14

Federal Government Finances and Employment

This section presents statistics relating to the financial structure and the civilian employment of the Federal Government. The fiscal data cover the essential apparatus of public financing, namely appropriations, taxes, receipts, expenditures, and debt. The personnel data relate to civil staffing and payrolls for the various public functions and agencies, to employee characteristics, and to civil service status.

Principal sources of the fiscal data are *The Budget of the United States Government* and related documents, published annually by the Bureau of the Budget, and the Treasury Department's annual *Combined Statement of Receipts, Expenditures, and Balances*, the official report relating to the receipts, appropriations, expenditures, and fund accounts. The *Statistical Appendix* to the *Annual Report of the Secretary of the Treasury* is a convenient summary of yearly data relating to somewhat broader fields.

The day-to-day cash operations of the Federal Government clearing through the accounts of the Treasurer of the United States are reported in the *Daily Statement of the United States Treasury*. The issue for the last day of the month contains information as to the public debt receipts and expenditures for the month, the public debt outstanding, and related data.

Receipts and expenditures of the Government classified as to budget and other transactions and showing the budget surplus or deficit appear in the *Monthly Statement of Receipts and Expenditures of the United States Government*. The monthly *Treasury Bulletin* contains analytical material on fiscal operations and related Treasury activities, including financial statements of Government corporations and business-type enterprises. Another special aspect of Federal finances is presented in the Treasury Department's monthly *Statement of United States Currency and Coin*.

Tax data are compiled by the Internal Revenue Service of the Treasury Department. The *Annual Report of the Commissioner of Internal Revenue* gives a detailed account of tax collections by kind of tax and by regions, districts, and States. The agency's three annual *Statistics of Income* reports present detailed data from individual income tax returns, corporation income tax returns, and business tax returns, respectively. The report on business tax returns presents financial data for sole proprietorships and partnerships and summary data for corporations. Periodic *Statistics of Income* publications present data from fiduciary income tax, estate tax, and gift tax returns, and data on sales of capital assets by individuals, foreign income and tax reported by corporations, depletion and related expenditures, and estate tax wealth.

Federal employment and payroll figures are compiled primarily by the Civil Service Commission and published in its regular *Annual Report* and its *Monthly Release, Federal Civilian Manpower Statistics*. It also publishes annual reports on pay of Federal employees, entitled *Pay Structure of the Federal Civil Service*, and on occupations of both white-collar and blue-collar Federal workers. Data on Federal employment are also issued by the Bureau of Labor Statistics in its *Monthly Labor Review* and in *Employment and Earnings* and *Monthly Report on the Labor Force*.

Major budget concepts.—The unified, comprehensive budget concept was introduced in the 1969 budget. Data showing unified budget totals of budget receipts and outlays are presented in the 1971 *Budget* for the years 1954 to 1971; more detailed historical summary tables show data since 1960.

The *Federal budget* totals embrace both the federally owned funds and the trust funds administered by the Government, such as the funds for social security, medicare, and highways. Within the totals, an *expenditure account* and a *loan account* are distinguished. The loan account reflects net lending except for certain nonrecourse domestic loans and the foreign loans which are made on noncommercial terms. Receipts of the Government arising from its sovereign or compulsory powers are reported as receipts; all other receipts, i.e., from business-type or market-oriented activities, are offset against expenditures. Outlays (expenditures and net lending) are reported on a checks-issued basis except for interest, which is recorded on an accrual basis.

The Federal sector of the *national income and product accounts* focuses attention upon the Federal transactions entering into national income, the gross national product, and other portions of the national economic accounts (see table 565). The figures include transactions of both Federal and trust funds. However, they include only receipts and expenditures which directly affect the current flow of income and output, and therefore exclude such transactions as loans. Also, the Federal sector accounts records many taxes as they accrue, instead of as they are collected, and records purchases when delivery is made.

Treasury receipts and expenditures.—All receipts of the Government, with a few exceptions, are deposited to credit of the Treasurer of the United States, regardless of ultimate disposition or, availability for expenditure. Under the Constitution, no money may be withdrawn from the Treasury unless appropriated by the Congress.

Receipts such as taxes customs duties, and miscellaneous budget receipts, which are collected by Government agencies, and expenditures represented by checks issued and cash payments made by disbursing officers are reported in the *Monthly Statement of Receipts and Expenditures of the United States Government* and in the annual *Combined Statement of Receipts, Expenditures, and Balances*. These monthly and annual reports include deposits and collections in, and payments from, accounts of Government agencies held outside the Treasury as well as those of the general account of the Treasurer of the United States and are on the same basis as the unified budget.

Public and private debt.—These data appear annually in the May issue of the monthly *Survey of Current Business* of the Department of Commerce. Net public and private debt outstanding is a comprehensive aggregate of indebtedness of borrowers after elimination of certain duplicating governmental and corporate debt. To obtain net figures, gross or total debt is adjusted for specific types of duplications pertaining to the following: (1) the Federal Government and its corporations and agencies generally; (2) State and local governments; and (3) within the private area, those affiliated corporations which operate under a single management. In the non-corporate private area, data are assumed to be net, since interpersonal debts are not measured in this series.

Employment and payrolls.—The Civil Service Commission collects employment and payroll data from all departments and agencies of the Federal Government but not from the District of Columbia Government. Employment figures represent the number of persons who occupied civilian positions on the last day of the calendar month shown and who are paid for personal services rendered for the Federal Government, regardless of the nature of appointment or method of payment. Intermittent workers are counted if they performed any service during the report month.

Federal payrolls include all payments for personal services rendered during the calendar month and payments for accumulated annual leave of employees who separate from the service. Since most Federal employees are paid on a biweekly basis, the calendar month earnings are partially estimated on the basis of the number of work days in each month where payroll periods overlap consecutive months.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

- Represents zero. ¹ Defined as total income from all sources subject to tax less exemptions and deductions allowed for certain expenses, losses, or other items specified by law. ² Internal Revenue Code of 1954. ³ Revenue Act of 1964. ⁴ Includes income tax surcharge. ⁵ Tax liability divided by stated income.

Source: Treasury Dept.; unpublished data.

No. 576. COMBINED FEDERAL INDIVIDUAL NORMAL TAX AND SURTAX RATES, BY TAXABLE INCOME BRACKET: 1939 TO 1970

[In percent. For selected income years. Actual rates rounded to nearest whole percent. The normal tax rates were 4 percent for 1939 and 3 percent for 1944-53 before adjustment for reductions from tentative tax in 1946-50. The Internal Revenue Code of 1954 combined the normal tax and surtax rates into a single rate schedule]

X. Not applicable. ¹ Income after exclusions, deductions, and exemptions. For 1948-70, joint return double the tax on one-half of their taxable income. For 1954-70, the same treatment is provided for a surviving spouse. For 1952-70 heads of households compute their tax by use of a rate schedule which provides for about one-half the split income benefits allowed married couples filing joint returns.

² Includes effect of percentage reductions of tentative tax, which is tax computed from rate schedule before application of percentage reductions. ³ Includes effect of 7.5 percent, 10 percent, and 2½ percent tax surcharge imposed for 1968, 1969, and 1970, respectively.

- Represents zero. NA Not available. ¹ For definition, see footnote 1, table 575.

² Income tax after credits including the investment credit for 1965-1968. For 1968, includes tax surcharge.

³ Joint returns counted twice in computing percent.

⁴ Exemptions: Joint return \$1,200, single \$800, each dependent \$800; additional exemption for taxpayer, and his spouse on joint return, of \$600 if blind and \$600 if age 65 or over.

⁵ Salaries after sick pay exclusion. ⁶ Gross salaries.

⁷ Beginning 1955, dividends after exclusions; beginning 1963, retitled "dividends in adjusted gross income."

⁸ Royalties included with rents. ⁹ For 1950, business profit or loss after net operating loss deduction.

¹⁰ Farm included with business or profession. ¹¹ Estate and trust income and losses included in other sources.

¹² Comprises all income subject to income tax not elsewhere listed.

No. 583. CORPORATION INCOME TAX RETURNS—SUMMARY: 1940 TO 1967

[Number of returns in thousands; money figures in billions of dollars. Based on returns for periods ending between July 1 of year shown and July 1 of following year, as filed, prior to audit adjustments and other changes made after filing. All corporations are required to file returns except those specifically exempt, such as fraternal, civic, and charitable organizations not operating for profit. Excludes returns of inactive corporations. See source publications for changes in law affecting comparability of historical data. Beginning 1955, based on a probability sample. Corporate data based on income tax returns appear on pp. 470, 473, 474-476 and 482. See also *Historical Statistics, Colonial Times to 1957*, series Y 280-291]

Inactive corporations, number of returns.....	44	33	37	35	47	66	69	76

X Not applicable. Z Less than \$500 million. ¹ Consists of business receipts, interest less amortizable bond premium, rents, royalties, net gain from capital assets (as defined by law) and other property, dividends, and other taxable income. ² Net income (less deficit) is a tax concept and therefore excludes wholly tax-exempt interest; beginning 1965, includes constructive taxable income from related foreign corporations.

³ For 1940, includes defense tax. Beginning 1965, data are after adjustment for investment credit. For 1967, includes tax surcharge. ⁴ Includes amounts from deficit returns reflecting investment credit payback and insurance company tax law provisions.

¹ Beginning 1947, includes debt of certain federally-sponsored agencies, in which there is no longer any Federal proprietary interest.

² Gross Federal debt consists of the public debt as defined in Second Liberty Bond Act of 1917, as amended, plus obligations to the public of Federal agencies in which Federal Government had a proprietary interest each year. Net Federal Government and agency debt is outstanding debt held by the public, as defined in *The Budget of the United States Government, Fiscal Year 1970*. Figures shown here are subject to revision. ³ Long-term debt, maturity of 1 year or more; short-term, less than 1 year. ⁴ Comprises debt of farmers and farm cooperatives to institutional lenders and Federal lending agencies, and farm mortgage debt owed to individuals and others; farmers' financial and consumer debt is included in "nonfarm" category. ⁵ Comprises debt incurred for commercial (nonfarm), financial, and consumer purposes, including debt owed by farmers for financial and consumer purposes.

Source: Dept. of Commerce, Office of Business Economics; *Survey of Current Business*, May 1970. (Based on data from various governmental agencies.)

NO. 591. CIVILIAN EMPLOYMENT AND PAYROLLS OF THE FEDERAL GOVERNMENT, BY BRANCH: 1940 TO 1970

[Includes data for employees in outlying areas of the United States and in foreign countries. Monthly employment figures represent number in active-duty status as of last day of month, including intermittent employees who worked during month. Annual employment figures are averages of monthly figures. Payrolls are totals for calendar year or month, as indicated. Excludes employees of Central Intelligence Agency and, beginning August 1959, those of the National Security Agency, for security reasons. Employees of General Accounting Office and Government Printing Office included with legislative branch. See *Historical Statistics, Colonial Times to 1957*, series Y 241-250, for employment for years ending June 30]

No. 596. SALARIES OF SELECTED EXECUTIVE AND LEGISLATIVE OFFICIALS IN THE FEDERAL GOVERNMENT: 1907 TO 1970

[In dollars. Year refers to year when salary change became effective]

YEAR	President	Vice President	Cabinet officers	Congressmen
1907.....	1 50, 000	12, 000	12, 000	7, 500
1909.....	75, 000	(²)	(²)	(²)
1925.....	(²)	15, 000	15, 000	10, 000
1946.....	(²)	20, 000	(²)	15, 000
1949.....	100, 000	30, 000	22, 500	(²)
1955.....	(²)	35, 000	(²)	22, 500
1956.....	(²)	(²)	25, 000	(²)
1964.....	(²)	43, 000	35, 000	(²)
1965.....	(²)	(²)	(²)	(²)
1969.....	(²) 200, 000	(²) 62, 500	(²) 60, 000	30, 000
1970.....	(²)	(²)	(²)	42, 500

¹ Compensation enacted in 1873. ² No change from prior year shown.

³ Economy legislation reduced amounts by 15, 10, and 5 percent successively during 1932-35. Full salary restored Apr. 1, 1935. ⁴ Includes \$2,500 expense allowance that was tax free until 1953. Allowance discontinued Mar. 1, 1955. For income tax, members may deduct up to \$3,000 a year for living expenses.

⁵ Plus \$50,000 for official expenses. ⁶ Plus \$10,000 expense allowance.

Section 15

State and Local Government Finances and Employment

Nationwide statistics relating to State and local governments, their numbers, finances, and employment, are compiled primarily by the Bureau of the Census. Each five years, the Bureau conducts a Census of Governments involving collection of data for all governmental units in the United States. The most recent is the 1967 Census of Governments; a summary of reports from that census appears in Appendix III of this book. The Bureau of the Census also conducts annual surveys which cover all the State governments and a sample of local governments. Publications issued annually by the Bureau of the Census include a report on governmental finances which presents figures for the Federal Government, nationwide totals for States and local governments, by type, and State-local data by States. Also issued annually are series of publications on State finances, city finances, and public employment and a descriptive leaflet *Recurrent Publications on Governments*. There are also two series of quarterly reports, one on tax revenue of State and local governments, the other on construction expenditures of State and local governments.

Basic information for Census Bureau statistics on governments is obtained mainly by mail canvass from State and local officials; however, financial data for each of the State governments and for some of the largest local governments are compiled from their official records and reports by Census Bureau personnel, and classified into uniform categories for statistical reporting.

Statistics regarding particular functions in which State and local governments have an important role are presented in other sections of this book (for example, Education, Social Insurance and Welfare Services, and Transportation—Land).

Governmental units.—The governmental structure of the United States includes, in addition to the Federal Government and the States, thousands of local governments—counties, municipalities, townships, school districts, and numerous kinds of “special districts.” As shown by table 604, more than 81,000 local governments were identified by the 1967 Census of Governments. The figures for governmental units include all agencies or bodies having an organized existence, governmental character, and substantial autonomy. While most of these governments can impose taxes, many of the special districts—such as independent public housing authorities, the New York Port Authority, and numerous local irrigation, power, and other types of districts—are financed from rentals, charges for services, benefit assessments, grants from other governments, and other nontax sources. The count of governments excludes semi-autonomous agencies through which States, cities, and counties sometimes provide for certain functions—for example, “dependent” school systems, State institutions of higher education, and certain other “authorities” and special agencies which are under the administrative or fiscal control of an established governmental unit.

Finances.—Unless otherwise stated, financial data in this section relate to the fiscal years of the respective governments. Federal and State government figures are for fiscal years ending June 30, except for a few States with other closing dates in the calendar year specified. Beginning 1963, local government figures are for fiscal years which closed at various dates during the 12 months ended June 30 of the year specified; figures for 1962 and earlier years are for fiscal years ended during the calendar year.

Nationwide government finance statistics must be classified and presented in terms of uniform concepts and categories, rather than according to the highly diverse terminology, organization, and fund structure of individual governments. Accordingly, financial statistics which appear here for individual States, although based upon the

official records and reports of these governments, will not agree directly with figures appearing in such original sources except where particular segments of the official accounts conform explicitly to standard reporting categories.

The statistics on governmental finances distinguish among general government, utilities and liquor stores, and insurance trust activities. The general government sector comprises all activities other than those classified as utilities, liquor stores, and insurance trusts. The utility sector includes only water supply, electric light and power, gas supply, and transit systems operated by local governments. Liquor stores are operated by 17 States and by a few local governments. Insurance trust figures relate to employee retirement, unemployment compensation, and other social insurance systems administered by State and local governments.

Employment and payrolls.—Public employment and payroll data are primarily from Census Bureau reports based on mail canvassing of State and local governments. Payroll amounts include all salaries, wages, and individual fee payments for the month specified, and employment numbers relate to all persons on governmental payrolls during a pay period of the month covered—including paid officials, temporary help, and (except where otherwise specified) part-time as well as full-time personnel. As in the case of financial data, figures shown for individual governments, such as States, cover major dependent agencies such as institutions of higher education, as well as the ordinary central departments and agencies of the government.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

No. 601. GOVERNMENT FINANCES—REVENUE, EXPENDITURE, AND DEBT: 1942 TO 1968

[In millions of dollars, except as indicated. Prior to 1960, excludes Alaska and Hawaii. Excludes intergovernmental revenue and expenditure. Local government amounts are estimates subject to sampling variation; see source. See also *Historical Statistics, Colonial Times to 1957*, series Y 334-681]

X Not applicable. ¹ Includes amounts for types of taxes not shown separately.

² For tobacco products, excludes North Carolina; for operators' licenses, excludes Hawaii.

³ Combines State and local taxes in jurisdictions imposing supplemental local sales taxes under State legislation.

⁴ For 12 months ending June 30. ⁵ Municipalities may impose a local tax of 11 cents per package, with full credit given by State against State-imposed tax. ⁶ 40 percent of wholesale price.

⁷ Combined State and local rates per gallon, in cents: Hawaii, 8; Honolulu, 8.5; Kauai, 9; and Maui, 10.

⁸ Estimated. ⁹ Includes portion of corporation excise taxes and surtaxes measured by corporate excess.

¹⁰ 30 percent of retail price.

- Represents zero.

¹ 16 percent based on Federal income tax at rates in effect on December 31, 1963.

² Tax credit.

³ Nonresidents; not general.

⁴ Plus surtax of 2 percent on intangibles income over \$5,000. Tax credit of one-half of 1 percent is applicable to the first \$9,000 of net taxable income.

⁵ Subject to specified limitations.

⁶ Plus \$10 filing fee for each return; tax credit of \$10 for each personal exemption allowed.

⁷ Incorporates 1969 legislative changes.

⁸ Interest and dividends, and capital gains on intangibles taxed at 8 percent; annuities, at 2 percent.

⁹ Minimum allowance; on earned income, actual amount up to \$4,000.

¹⁰ Less fixed deductions ranging from \$5 up to \$135.

¹¹ Taxpayers are allowed credit of 5 percent of the tax, as computed.

¹² Individuals, estates, and trust taxed at rate of 10 percent of adjusted Federal income tax liability.

¹³ Income from interest and dividends taxed at 4.25 percent.

¹⁴ Tax imposed on N.Y. resident individuals deriving income from N.J. sources and N.J. residents deriving income from N.Y. sources.

¹⁵ Plus tax credit of \$10 for single person and \$25 for married persons or heads of households.

¹⁶ Dividend, interest, and net capital gains income taxed at 10 percent.

¹⁷ Dividends and interest taxed at 6 percent; dividends from corporations with 75 percent of property taxable in State taxed at 4 percent.

¹⁸ Individuals taxed at rate of 25 percent of Federal income tax liability.

- Represents zero.

¹ Excludes separately assessed mineral rights, realty assessments not subject to use-classification, and other high-value properties not subject to sample-based survey.

² Statewide size-weighted average ratio of assessed value to sales price of sold properties.

³ Not computed for commercial and industrial property because of insufficient sales representation.

Section 16

Banking, Finance, and Insurance

Flow of funds.—The flow of funds accounts of the Federal Reserve System (see tables 638 to 644) bring together statistics on all of the major forms of financial transactions and financial claims to present an economy-wide view of asset and liability relationships. In flow form, the accounts relate borrowing and lending to one another and to the nonfinancial activities that generate income and production. Each claim outstanding is included simultaneously as an asset of the lender and as a liability of the debtor. The accounts also indicate the balance between asset totals and liability totals over the economy as a whole. Data included here present end-of-year asset and liability positions in financial claims rather than flows that occurred during the year. Quarterly data are available in the *Federal Reserve Bulletin*; a discussion of the concepts and organization of the accounts appears in *Flow of Funds Accounts, 1945-1968*, published by the Board of Governors of the Federal Reserve System.

Banking system.—Banks in this country are organized under the laws of both the States and the Federal Government. State-chartered banks are supervised by officials of the respective States. "National" banks are supervised by the Comptroller of the Currency. *Reports of Condition* have been collected from national banks since 1863. Summaries of these reports are published in the Comptroller's *Annual Report*, which also presents data on the structure of the national banking system.

The Federal Reserve System was established in 1914 to exercise central banking functions, some of which are shared with the U.S. Treasury. It includes national banks and such State banks as voluntarily join the System. Statements of State bank members are consolidated by the Board of Governors of the Federal Reserve System with data for national banks collected by the Comptroller of the Currency into totals for all member banks of the System. Balance sheet data for member banks are published in condensed form in the *Federal Reserve Bulletin*.

The Federal Deposit Insurance Corporation, established in 1933, insures each depositor up to \$20,000 in banks which are members of the Federal Reserve System and in such nonmember banks as join the insurance fund. Beginning 1947, a balance sheet for all banks in the country has been published semiannually by the Corporation in *Assets, Liabilities, and Capital Accounts—Commercial and Mutual Savings Banks*; an abbreviated balance sheet for all banks, has been published monthly by the Board of Governors of the Federal Reserve System.

Savings and loan and other credit agencies.—Government corporations and credit agencies make available credit of specified types or to specified groups of private borrowers, either by lending directly or by insuring or guaranteeing loans made by private lending institutions. Data on operations of Government credit agencies, along with other Government corporations, are available in reports of individual agencies; data on their assets and liabilities are published quarterly in the *Treasury Bulletin*.

Among other types of credit agencies, the most important are savings and loan associations, insurance companies, finance companies dealing primarily in installment sales financing, credit unions, and personal loan companies. Statistics of savings and loan associations are collected by the Federal Home Loan Bank Board. Statistics on loans, investments, cash, etc., of life insurance companies are published principally by The Spectator and by the Institute of Life Insurance in its *Life Insurance Fact Book*. Federal credit unions are under the supervision of the National Credit Union Administration, an independent agency created in 1970. Consumer credit data are published currently in the *Federal Reserve Bulletin*.

Currency.—Currency, including coin and paper money, represents about one-fifth of the total media of exchange in the United States, with most payments made by check. All currency is now issued by the Federal Reserve Banks and the Treasury.

“Currency in circulation” or “money in circulation” (official *Statement of United States Currency and Coin*) refers to all coin and paper money outside the Treasury and Federal Reserve Banks, except gold and silver coin known to have been exported and, beginning with 1934, all gold coin. It includes all coin and paper money held by the public in the United States, whether in current active use or held idle. It also includes cash in vaults of commercial and savings banks, currency lost or destroyed and currency carried abroad by travelers. Historical data on the stock of money and money in circulation appear in the *Annual Report of the Secretary of the Treasury*.

Securities.—A comprehensive series of new issues with detailed information on the intended uses of net and gross proceeds has been compiled by the Securities and Exchange Commission on a monthly basis since 1934. The data cover substantially all new issues offered for cash sale in the United States in amounts over \$100,000 and with terms to maturity of more than one year. (See table 672.) This series is published monthly in the *Statistical Bulletin* of the Securities and Exchange Commission, the *Federal Reserve Bulletin*, and the *Survey of Current Business*.

In addition, the Commission has been compiling statistics since 1933 on changes in security holdings of institutional groups and individuals, and net change in outstanding corporate securities through cash transactions. The latter data are published in the Commission's *Statistical Bulletin* and also in the *Federal Reserve Bulletin*.

Monthly figures on the total value and volume of securities sold on each of the national securities exchanges have been published since October 1934 by the Securities and Exchange Commission. These figures include all sales effected on exchanges except, since March 1944, U.S. Government issues. They cover odd lots as well as round lots. The Commission also publishes figures on the total daily round-lot volume of trading in stocks on the New York Stock Exchange and the American Stock Exchange, showing short sales and several categories of member and nonmember purchases and sales. Daily odd-lot purchases and sales are reported separately.

Insurance.—Insuring companies are classified as either life or property. Companies which underwrite accident and health insurance only are included with life insurance; those which underwrite accident and health insurance in addition to one or more property lines are included with property insurance. Insuring companies, other than those classified as life, are permitted to underwrite one or more property lines provided they are so licensed and have the necessary capital and/or surplus.

Insurance is regulated by the various States and the District of Columbia, which collect a great deal of primary information on it. The Federal Government does not collect comprehensive statistics on insurance on a national basis.

There are a number of published sources for statistics on the various classes of insurance—life, health, fire, marine, and casualty. Individual States collect data on all insurers operating within their respective jurisdictions, and many of the States publish an annual insurance report giving individual company data and aggregates of certain items for the companies operating within the State. Organizations representing certain classes of insurers publish reports for these classes. Among them are the annual *Life Insurance Fact Book* of the Institute of Life Insurance, and the annual *Source Book of Health Insurance Data* of the Health Insurance Institute. Other sources are the commercial publishers, such as The Spectator and the Alfred M. Best Company. The annual *Spectator Health Insurance Review* contains financial and operating data for individual health and accident insurance companies, including Blue Cross and Blue Shield Plans. *Best's Life Insurance Reports* and *Best's Insurance Reports*, fire and casualty edition, both annual publications, give individual company data for all types of life and fire and casualty insurance companies.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

1969—Apr. 17.....	17	17½	12½	13	3	3	6
In effect Apr. 30, 1970.....	17	17½	12½	13	3	3	6
Legal requirements as of Apr. 30, 1970:							
Minimum.....	10		7		3	3	3
Maximum.....	22		14		10	10	10

¹ When two dates are shown, the first applies to the change at reserve city banks and the second to the change at country banks.

² Demand deposits subject to reserve requirements are gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.

³ Effective Jan. 5, 1967, time deposits such as Christmas and vacation club accounts became subject to same requirements as savings deposits. Beginning Oct. 16, 1969, a member bank is required to maintain, against its foreign branch deposits, a reserve equal to 10 percent of the amount by which net balances due to, and certain assets purchased by, such branches from the bank's domestic offices and credit extended by such branches to U.S. residents exceed certain specified base amounts. A similar 10 percent reserve requirement is imposed on borrowings by domestic offices of a member bank from foreign banks, except that only a 3 percent reserve is required against such borrowings that do not exceed a specified base amount.

No. 649. FEDERAL RESERVE SYSTEM, ALL MEMBER BANKS—INCOME, EXPENSES, AND DIVIDENDS: 1940 TO 1969

[Money figures in millions of dollars; ratios in percentages. Prior to 1960, excludes all member banks in Alaska (except for one bank in 1955) and Hawaii; beginning 1960, includes one member bank in the Virgin Islands]

¹ For 1950, average yield on taxable bonds due or callable after 15 years; thereafter, on those due or callable in 10 years or more. Data from Board of Governors of the Federal Reserve System.

² For 1950, estimated yields prevailing on highest grade issues in first quarter of year; thereafter, in February only. February 1969 percent yield as follows: 5 years, 8.10; 10 years, 8.00; 20 years, 7.60; and 30 years, 7.60. Through 1955, from National Bureau of Economic Research, New York, N. Y.; thereafter, Scudder, Stevens & Clark, New York, N. Y.

³ More than usually liable to error. ⁴ Beginning Dec. 18, 1967, excludes Aaa railroad bonds.

⁵ Number of issues as of Mar. 31, 1969; number varies for earlier years.

⁶ Yields based on number of stocks and determined from average of median yields as follows: 1950 to 1965 (Sept. 8), 14 stocks, 8 yields; beginning Sept. 9, 1965, 10 stocks, 8 yields. Issues converted to a price equivalent to \$100 par and a 7 percent annual dividend before averaging.

⁷ Yields are obtained by dividing the average per-share dividend by the average per-share price in each group. ⁸ Includes also stocks for fire insurance companies and N. Y. banks, and 1 additional public utility, which is a continuous series composed of electric utilities (representing operating electric companies).

Dividends to stockholders-----	90	115	160	237	266	263	378	515

NA Not available. ¹ For 1955, includes \$1.9 billion group life insurance for Federal employees; for 1967, \$8.3 billion; and for 1968, \$3.4 billion. ² Includes servicemen's group life insurance of \$27.8 billion.

³ The rate is the ratio of the number of policies lapsed or surrendered (for cash, extended term, or reduced paid-up insurance), less reinstatements, to the mean number of policies in force.

⁴ Total income and payments to policyholders include data on operations of accident and health departments of life insurance companies; since these data are not shown separately, components do not add to totals.

⁵ Beginning 1955, accidental death benefits included with death payments.

NO. 694. MAJOR MEDICAL EXPENSE INSURANCE—PERSONS COVERED: 1955 TO 1968

[In thousands. As of December 31. For 1955, persons of all ages; thereafter, persons under 65 years of age only.

Represents persons covered by insurance companies only. Excludes members of the Blue Cross-Blue Shield, medical-society sponsored, and all other independent plans. Major medical expense insurance provides protection against especially heavy medical bills resulting from "catastrophic" or prolonged illness, and is used as a supplement to basic medical care insurance or as a comprehensive integrated program providing both basic and major medical protection, including charges for private duty nursing, drugs, and medical appliances]

Section 17

Business Enterprise

This section relates to the place and behavior of the business firm and of business initiative in the American economy. It includes data on the number and types of businesses; assets and liabilities of corporations; types of business income and expenditures; business sales and inventories; employment and payrolls for businesses subject to the Federal Insurance Contributions Act; consumer cooperatives; mergers, acquisitions, and business failures.

The principal sources of these data are the *Survey of Current Business* and *The National Income and Product Accounts of the United States, 1929-1965*, published by the Office of Business Economics; *County Business Patterns* issued by the Bureau of the Census; the *Federal Reserve Bulletin* issued by the Board of Governors of the Federal Reserve System; the annual *Statistics of Income* reports of the Internal Revenue Service; *The Failure Record Through (Year)*, issued by Dun & Bradstreet, Inc., New York; and *Fortune* and *The Fortune Directory*, issued by Fortune, New York. Other sources are publications of the Securities and Exchange Commission, the Federal Trade Commission, and the Administrative Office of the United States Courts.

Business firms.—A business firm is generally defined as a business organization under a single management and may include one or more plants or outlets; a firm doing business in more than one industry is classified by industry according to the major activity of the firm as a whole. The Internal Revenue Service concept of business firm relates primarily to the legal entity used for tax reporting purposes. Its *Statistics of Income* reports present data separately for proprietorships, partnerships, and corporations. While a few corporations file consolidated tax returns (i.e., one return for the parent firm and all its subsidiaries), most corporate tax returns represent individual corporations, some of which are affiliated through common ownership or control with other corporations filing separate returns.

Corporate assets and liabilities.—In its annual report, *Statistics of Income, Corporation Income Tax Returns*, the Internal Revenue Service presents balance sheet and income data for all active U.S. corporations. The *Quarterly Financial Report of U.S. Manufacturing Corporations*, published jointly by the Federal Trade Commission and the Securities and Exchange Commission, presents current quarterly income account and balance sheet data for manufacturing industries. In a quarterly release *Net Working Capital of U.S. Corporations*, the Securities and Exchange Commission publishes data on components of current assets and liabilities of all U.S. corporations exclusive of banks, savings and loan associations, insurance companies, and investment companies.

Corporate income, profits, dividends, and taxes.—Several agencies, among them the Internal Revenue Service, the Office of Business Economics, and the Federal Reserve Board, compile corporate income account data. These data, however, are not comparable because of differing methods of compilation.

The Internal Revenue Service publishes financial data for all business enterprises, based on income tax returns filed by proprietorships, partnerships, and corporations. These data appear in *Statistics of Income—Business Income Tax Returns* and *Corporation Income Tax Returns*. Supplemental reports published periodically present data on foreign income and taxes reported by U.S. corporations.

The corporate data issued by the Office of Business Economics (OBE) are a part of its national income and product accounts and are defined as required for purposes of national income estimation. The primary sources of data for the estimates of pro-

fits, taxes, dividends, and undistributed profits are the original corporate tax returns submitted to the Internal Revenue Service. Various adjustments of the *Statistics of Income* data are required by the national income treatment, particularly with respect to depletion, capital gain or loss, treatment of bad debts, measurement of income received from abroad, and intercorporate dividends, and because the original corporate income statements do not represent the final stage of information. OBE's corporate profits data also include the net earnings of several federally sponsored credit agencies which are not included in *Statistics of Income*.

Federal Reserve Board data relating to profits and dividends apply to particular industrial segments only, such as large manufacturing and public utility corporations.

Sources and uses of corporate funds.—These data indicate capital requirements of corporations and the manner in which they are financed. Sources of funds are equal to their uses. Certain discrepancies, however, interfere with this equality due to omission of such factors as (1) money accruing to corporations from an excess of sales over purchases of used plant and equipment, and (2) transactions in securities held as permanent investments except public offerings. Also, the balance sheet data upon which many of the financial flow estimates are based are not fully comparable with the tax-return based estimates of internal sources, or the establishment series underlying the figures on inventory change.

Business sales and inventories.—Business sales and inventories as defined by the Office of Business Economics are the sum of data for manufacturing, merchant wholesalers, and retail trade. Sales are estimated aggregate values and inventories are book values at the end of the period. Sales signifies sales or shipments for retail and wholesale trade and billings or shipments for manufacturing. Trade inventories are valued at cost of merchandise on hand, while manufacturers' inventories are valued at approximate current costs or at book values, as reported by the manufacturer. Inventories data for manufacturing (see table 727) are based on data from the *Census of Manufactures* and the *Annual Survey of Manufactures*.

To ascertain net physical change in nonfarm inventories, book values of beginning and ending inventories of each year are expressed in terms of constant base year prices by means of selected Bureau of Labor Statistics wholesale price indexes appropriate to each industry. Net increment in deflated book value figures is then converted to a current price basis by index ratios or current prices to base year prices. Change in farm inventories is estimated by the Department of Agriculture from physical quantity data; therefore, no inventory valuation adjustment is shown.

Plant and equipment expenditures.—A joint survey by the Securities and Exchange Commission and the Department of Commerce presents quarterly data on actual and anticipated plant and equipment expenditures. In addition, at the beginning of each year, a survey is made of plans of business regarding capital expenditures during the year. The data are based on reports submitted by corporations registered with the Securities and Exchange Commission, by transportation companies under Interstate Commerce Commission jurisdiction, and by a large sample of nonregistered companies reporting to the Department of Commerce.

Industrial and commercial failures.—These data, collected by Dun & Bradstreet, are available by years since 1857 and by months since 1900. The number of failures includes concerns involved in court proceedings or voluntary actions likely to end in loss to creditors; discontinuances with outside obligations paid in full are not included. Data cover manufacturers, wholesalers, retailers, building contractors, and certain types of commercial service, but do not encompass finance, insurance, and real estate companies; railroads and steamship lines; and amusement enterprises. Failures data are published monthly in *Dun's Review*.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

FIG. XXIX. BUSINESS EXPENDITURES FOR NEW PLANT AND EQUIPMENT: 1950 TO 1970

NA. Not available.

¹ Dept. of Health, Education, and Welfare, Social Security Admin. "Business" refers to loans outstanding.

² Dept. of Agriculture, Rural Electrification Admin. Electric distribution cooperatives currently borrowing from REA, average number of consumers served, and total revenues.

³ Dept. of Agriculture, Rural Electrification Admin. Cooperatives currently borrowing from REA, number of subscribers at end of year, annual revenues.

⁴ Dept. of Health, Education, and Welfare, Social Security Admin. Estimated enrollees and annual income of plans.

⁵ Dept. of Housing and Urban Development, Federal Housing Admin. "Associations" refers to cooperative projects insured, "Members" to housing units, and "Business" to value of mortgages. Data include cooperatives insured under Sections 213 and 221(d)(3) cumulative from their inception through Dec. 31.

⁶ Data cover fiscal years 1964-65 and 1967-68, preliminary. Since many cooperatives do more than one type of business, totals are less than would be obtained by adding number of cooperatives handling individual items or performing individual services. Figures for members refer to estimated number of memberships; some persons hold more than one.

Source: Dept. of Agriculture, Farmer Cooperative Service; unpublished data, except as noted.

NO. 710. MINORITY- AND NONMINORITY-OPERATED BUSINESSES—SPECIFIED CHARACTERISTICS: 1968

[Based on interviews conducted during the summer of 1968 with a sample of businesses filing business tax returns with Internal Revenue Service in 1966. "Minority" identified to include the following groups: Negro, Chinese, Japanese, Puerto Rican, and Mexican or Latin American. "Share of business" refers to percent of all businesses operated by specified group]

NO. 711. REPORTING UNITS, EMPLOYMENT, AND PAYROLLS UNDER SOCIAL SECURITY, BY INDUSTRY: 1962 AND 1968

[Based on reports of employers under the Federal Insurance Contributions Act. A reporting unit is a single establishment except that, for nonmanufacturing industries, a group of similar establishments of an employer located in the same county is also considered one reporting unit. Data exclude farm and domestic workers, government employees, the self-employed, railroad employment subject to Railroad Retirement Act, and employees on ocean-borne vessels. In 1968, employment coverage within the scope of source compilation was 76 percent of total paid civilian employment]
